

## Federal Democratic Republic of Ethiopia OCCUPATIONAL STANDARD

## FARM MACHINERY AND EQUIPMENT MAINTENANCE

NTQF Level I, II, III, IV and V

Ministry of Education July 2014

## Introduction

Ethiopia has embarked on a process of reforming its TVET-System. Within the policies and strategies of the Ethiopian Government, technology transformation – by using international standards and international best practices as the basis, and, adopting, adapting and verifying them in the Ethiopian context – is a pivotal element. TVET is given an important role with regard to technology transfer. The new paradigm in the outcome-based TVET system is the orientation at the current and anticipated future demand of the economy and the labour market.

The Ethiopia Occupational Standards (EOS) is the core element of the Ethiopian National TVET-Strategy and an important factor within the context of the National TVET-Qualification Framework (NTQF). They are national Ethiopian standards, which define the occupational requirements and expected outcome related to a specific occupation without taking TVET delivery into account.

This document details the mandatory format, sequencing, wording and layout for the Ethiopia Occupational Standard which comprised of Units of Competence.

A Unit of Competence describes a distinct work activity. It is documented in a standard format that comprises:

- Occupational title and NTQF level
- Unit title
- Unit code
- Unit descriptor
- Elements and Performance criteria
- Variables and Range statement
- Evidence guide

Together all the parts of a Unit of Competence guide the assessor in determining whether the candidate is competent.

The ensuing sections of this EOS document comprise a description of the occupation with all the key components of a Unit of Competence:

- chart with an overview of all Units of Competence for the respective level including the Unit Codes and the Unit Titles
- contents of each Unit of Competence (competence standard)
- occupational map providing the Technical and Vocational Education and Training (TVET) providers with information and important requirements to consider when designing training programs for this standards and for the individual, a career path

Occupational Standard: Farm Machinery and Equipment Maintenance Level I	
Unit Title	Identify Environmental Regulations and Best Practice in a
	Workplace or Business
Unit Code	AGR MEM1 01 0714
Unit Descriptor	This unit of competency covers the competence to identify environmental regulations and avoid potential hazards in an automotive workplace.

Elements	Performance Criteria
1. Identify environment regulations	1.1. Reasons for ethical environmental practice in an automotive workshop are identified
regulations	1.2. Responsibilities of staff in an automotive workshop are identified
	1.3. Penalties for individual breaches of legislation are identified
	1.4. Methods to minimise waste and sort store for recycling or disposal are identified
	1.5. Methods to sort and dispose of packaging on goods received are identified
2. Identify hazards to stormwater	2.1. Actions to be taken to ensure no waste water is allowed to enter stormwater system are identified
	2.2. Storage methods for parts and components containing environmentally hazardous <i>materials</i> are identified
	2.3. Recycling and storage procedures for liquid wastes are identified
	2.4. Uses of a spill kit are identified
	2.5. Procedures to keep workplace clean and prevent unintentional stormwater pollution are identified
3. Identify hazards to air quality	3.1. Hazards of airborne particles are identified, and methods to minimise and contain are identified
	3.2. Hazards of gases and fumes are identified, and methods to minimise and contain are identified
	3.3. Effects of noise creating activities and methods to minimise these are identified

Variable	Range
Materials	may include:
	<ul> <li>Material Safety Data Sheet</li> </ul>

Evidence Guide			
Critical Aspects of Competence	<ul> <li>Must demonstrate skills and knowledge in:</li> <li>Demonstrate knowledge of environmental regulations and best practice as they would apply in an automotive workplace or business.</li> <li>Identify material used in an automotive business and assess their environmental impact</li> </ul>		

Page 7 of 336 Ministry of Copy	EducationFarm Machinery and Equipment MaintenancerrightEthiopian Occupational Standard	Version 1 July 2014
--------------------------------	--	------------------------

Underpinning	Demonstrate knowledge of:
Knowledge and Attitudes	<ul> <li>aspects of environmental legislation and its implications for work being undertaken in an automotive business</li> <li>characteristics and potential environmental impact of products used in the automotive industry</li> <li>philosophy of prevention, reuse, reduce, recycle</li> </ul>
	<ul> <li>effects of noise pollution and methods to minimize it</li> </ul>
Underpinning Skills	<ul> <li>Demonstrate skills to:</li> <li>collect, organise and understand information related to environmental procedures from legislation, regulations and workshop practices in a workplace or business</li> <li>communicate ideas and information to enable all work is undertaken in accordance with environmental best practice, coordination of work with site supervisor, other workers and customers, and reporting of work outcomes and problems</li> <li>plan and organise activities, including preparation of Equipment and material and selection of worksite to avoid environmental contamination, backtracking, workflow interruptions or wastage</li> <li>work with others and in a team by recognising dependencies and using cooperative approaches to minimise wastage, optimise workflow and productivity</li> <li>use mathematical ideas and techniques to correctly complete measurements and estimate material requirements</li> <li>use planning, checking and inspection techniques to avoid environmental contamination and wastage</li> <li>use workplace technology related to environmental protection Equipment</li> </ul>
Resource Implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to
Mathada of	Information on workplace practices and OHS practices.
Methods of Assessment	<ul> <li>Competence may be assessed through:</li> <li>Interview / Written Test</li> <li>Observation / Demonstration with Oral Questioning</li> </ul>
Context of Assessment	Competence may be assessed in the work place or in a simulated work place setting.

--	---------------

Occupational Standard: Farm Machinery and Equipment Maintenance Level I		
Unit Title	Use and Maintain Basic Tools and equipments	
Unit Code	AGR MEM1 02 0714	
Unit Descriptor	This unit covers the knowledge, skills and attitudes required to use and maintain basic measuring devices, tools and Equipment to carry-out workshop activities. Work requires individuals to demonstrate judgement and problem- solving skills in managing own work activities and contributing to a productive team environment	

	Elements	Performance Criteria	
ĺ	1. Prepare work station	1.1	Workstation is made ready for work activities.
	Station	1.2	Procedures and information such as workshop manuals and specifications are acquired.
		1.3	Methods in identifying tools and equipment are implemented in accordance with workplace procedures and manufacturer specifications.
		1.4	Identified/selected <i>testing devices, tools and equipment</i> are checked for functionality and made ready for use.
		1.5	Unsafe or faulty tools and equipment including measuring tools are identified and marked for repair according to standard company procedure.
-		1.6	OHS measures and warnings in relation to working with tools and equipment are observed throughout the work operation.
	2. Carry-out measurements	2.1	<i>Measuring tools/devices</i> are selected in line with job requirements.
		2.2	Measuring/testing devices are checked and adjusted as needed in accordance with work requirements.
		2.3	Appropriate method of conducting measurements is implemented in accordance with workplace procedures and manufacturer specifications.
		2.4	Measuring instruments are handled without damage and according to procedures.
		2.5	Measurement results are compared with manufacturer specifications to indicate compliance or non-compliance.
_		2.6	Results are documented with evidence and supporting information and recommendation(s).
	3. Use tools and Equipment	3.1	Tools and measuring equipment are used according to tasks undertaken.
		3.2	All safety procedures in using tools and Equipment are observed at all times and appropriate <i>Personal Protective Equipment (PPE)</i> is used.
		3.3	Tools and equipment are handled without damage and according to procedures.
l		3.4	Malfunctions, unplanned or unusual events are reported to
ſ	Mi	nietry (	of Education Earm Machinery and Equipment Maintenance Version 1

Page 9 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

		the supervisor.
4. Maintain tools and Equipment	4.1	Routine <i>maintenance</i> of tools is undertaken according to standard operational procedures, principles and techniques.
	4.2	Equipment and tools are cleaned before and after use in accordance with manufacturer's instructions.
	4.3	Tools and equipment are stored safely in appropriate locations in accordance with manufacturer's specifications or standard operating procedures.

Variable	Range
Testing devices,	It may includes but not limited to:
tools and	<ul> <li>Hand tools for adjusting, dismantling, assembling, finishing,</li> </ul>
Equipment	cutting
	• Tool set includes the following but not limited to: screw drivers,
	pliers, punches, wrenches, files
	<ul> <li>Generic Mechanic Tools set (Wrench, pliers)</li> </ul>
	<ul> <li>Power tools (Impact and air Wrench)</li> </ul>
	<ul> <li>Measuring and testing Tools (Torque wrench, Calliper)</li> </ul>
	<ul> <li>Special tools (Extractor, compression tester)</li> </ul>
	<ul> <li>Equipment (trolley jack, hydraulic press)</li> </ul>
Measuring	may include but not limited to:
tools/devices	Multi meter
	tachometer
	timing light
	engine analyzer
	tune scopes
	test lamp
	distributor test bench
Personal	may include but not limited to:
Protective	Gloves
Equipment (PPE)	Protective eyewear
	Apron/overall
	Safety shoes
Maintenance	may include but not limited to:
	Cleaning
	Lubricating
	Tightening
	Simple tool repairs
	Hand sharpening
	<ul> <li>Adjustment using correct procedures</li> </ul>

Evidence Guide	
Critical Aspects of Competence	<ul> <li>Must demonstrate knowledge and skills competence to:</li> <li>apply safe working practices at all times</li> <li>communicate information about processes, events or tasks being undertake to ensure a safe and efficient working environment</li> <li>identify appropriate measuring devices, tools and Equipment</li> <li>use measuring devices, tools and Equipment according to tasks</li> <li>perform all tasks to specification</li> </ul>

<b>Occupational Stand</b>	rd: Farm Machinery and Equipment Maintenance Level I		
Unit Title	Prepare Farm Machineries and Equipments for Use		
Unit Code	AGR MEM1 03 0714		
Unit Descriptor	This unit of competency covers the skills and knowledge required to clean, and perform inspection of farm machineries and equipment /component before and after use.		

Elements	Performance Criteria
1. Prepare for work	1.1. Work instructions are used to determine work requirements, including method, material and equipment.
	1.2. Job specifications are read and interpreted.
	1.3. Workplace Health and Safety (WHS) requirements, including personal protection equipment needs are observed throughout the work.
	1.4. Material for work is selected.
	1.5. Equipment and tooling are identified and checked for effective and <i>safe operating procedures</i> .
	1.6. Procedures are determined to minimise waste material.
	1.7. Procedures are identified for maximising energy efficiency while completing the work.
2. Clean Farm Machineries and equipment	2.1 <i>Farm Machineries and equipment /component</i> are cleaned in the prescribed manner, to industry standard and secured in <i>preparation</i> for customer pick up.
	2.2 Cleaning is completed without causing damage to component or system.
	2.3 Cleaning operations are carried out according to industry standards/ <i>regulations</i> /guidelines, WHS requirements, legislation and <i>enterprise procedures/policies</i> .
	2.4 <i>Emergency procedures</i> are identified and followed as per organization's guideline
4. Clean up work	4.1. Material that can be reused is collected and stored.
maintain equipment	4.2. Waste and scrap are removed following workplace and environmental requirement procedure.
	4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.
	4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.
	4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.
	4.6. <i>Tooling and equipment and material</i> are maintained in accordance with workplace procedures.

Page 12 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

Variable	Range
Workplace Health and Safety (WHS)	<ul> <li>Are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:</li> <li>protective clothing and equipment</li> </ul>
	<ul> <li>use of tooling and equipment</li> </ul>
	<ul> <li>workplace environment and safety</li> </ul>
	handling of material
	use of fire-fighting equipment
	enterprise first aid
	hazard control and hazardous material and substances
Personal protective	is to include that prescribed under legislation/regulation/codes of
equipment	practice and workplace policies and practices
Safe operating	are to include, but are not limited to:
procedures	<ul> <li>operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors</li> </ul>
Farm Machineries	may include:
and equipment	prime movers such as:
/component	Different types of tractors
	Implements (trailed , semi-mounted, mounted and self
	propelled type)
	Sub sollers
	➢ piougn
	Marrower harrower
	planel/levellel ridger/furrowers
	> moulder
	<ul> <li>Fertilizer applicator</li> </ul>
	> weeder
	➢ sprayer
	➢ harvester
	➤ seeder
	3 point linkages
	PTO connections
	Draw bars
	Hydraulic connections
	➢ Fittings
	Power cylinders
	> Couplings
	Control valves
Droporation	ouner implement components/assemblies/accessories     are to include:
methode	are to include.
	<ul> <li>manual or machine assisted cleaning</li> <li>visual inspection and testing</li> </ul>
	<ul> <li>visual inspection and testing</li> <li>obsektion for evotome energies</li> </ul>
	uneukiisis iui sysiems uperation     written and verbal communication
Page 13 of 336 Minis	stry of EducationFarm Machinery and Equipment MaintenanceVersion 1CopyrightEthiopian Occupational StandardJuly 2014

Regulations	<ul> <li>regulatory requirements are to be in accordance with applicable legislation, regulations, certification requirements and codes of practice, and may include: <ul> <li>award and enterprise agreements</li> <li>industrial relations</li> <li>Relevant Ethiopian standards and Design Rules</li> <li>Environment Protection Regulations (Diesel Fuels)</li> <li>National Environment Protection Measures for Diesel Vehicles (Guidelines)</li> <li>confidentiality and privacy</li> <li>OHS</li> <li>the environment</li> <li>relevant industry codes of practice</li> <li>duty of care</li> </ul> </li> </ul>
Enterprise procedures/policies	<ul> <li>may include:</li> <li>quality policies and procedures, including relevant Ethiopian standards</li> <li>OHS, sustainability, environment, equal opportunity and anti-discrimination</li> <li>manufacturer specifications and industry codes of practice</li> <li>safe work procedures</li> <li>reporting and recording procedures</li> </ul>
Emergency procedures	<ul> <li>related to this unit are to include, but are not limited to:</li> <li>emergency shutdown and stopping of equipment</li> <li>extinguishing fires</li> <li>enterprise first aid requirements</li> <li>worksite evacuation</li> </ul>
Environmental	are to include, but are not limited to:
requirements	waste management, noise, dust and clean-up management     may include:
and materials	Cleaning materials
	Hand tools and equipment
	Measuring tools
	Washing materials
	high-pressure cleaners

Evidence Guide	
Critical Aspects of	Must demonstrate skills and knowledge in:
Competence	observing safety procedures and requirements
	<ul> <li>communicating effectively with others involved in or affected by the work</li> </ul>
	<ul> <li>selecting methods and techniques appropriate to the circumstances</li> </ul>
	completing preparatory activity in a systematic manner
	<ul> <li>applying farm machineries and equipments protection methods</li> </ul>
	applying inspection procedures
	applying cleaning procedures
	applying testing procedures

Occupational Standard: Farm Machinery and Equipment Maintenance Level I	
Unit Title	Test, Service and Maintain Battery Storage Systems
Unit Code	AGR MEM1 04 0714
Unit Descriptor	This unit covers the competence to inspect service and maintain battery storage systems in on-site major earth moving and plant equipment. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Elements	Performance Criteria
1. Prepare to undertake inspection	<ol> <li>1.1. Nature and scope of <i>environmental requirements</i> are identified and confirmed.</li> <li>1.2. <i>OHS</i> requirements, including individual state/territory regulatory requirements and <i>personal protection equipment</i> needs are observed throughout the work.</li> </ol>
	1.3. <b>Safe operating procedures</b> and <b>information</b> such as site procedures and specifications, and tooling are sourced.
	1.4. Technical requirements for inspection are sourced and support.
	1.5. Equipment is identified and prepared.
	1.6. Warnings in relation to working with batteries are observed.
2. Conduct inspection	2.1. Methods for the conduct of inspection are implemented by statutory/regulatory authorities in accordance with workplace procedures and manufacturer/component supplier specifications.
	2.2. Inspection results are compared with manufacturer/ component supplier specifications.
	2.3. Results are documented with evidence and supporting information and recommendations made.
	2.4. Report is forwarded to persons for action in accordance with workplace procedures.
3. Prepare to service and maintain	3.1 OHS requirements, including individual state/territory regulatory requirements and personal protection needs are observed throughout the work.
	3.2 Procedures and information are identified and sourced.
	3.3 Technical and tool requirements for servicing and maintenance are identified and support.
	3.4 Equipment is identified and prepared.
4. Carry out service and maintenanc	4.1. Methods for the conduct of service and/or maintenance are implemented in accordance with workplace procedures and manufacturer/component supplier specifications.
	4.2. Adjustments made during service and/or maintenance is in accordance with manufacturer/component supplier specifications.
Page 16 of 336	Ministry of Education CopyrightFarm Machinery and Equipment MaintenanceVersion 1LineEthiopian Occupational StandardJuly 2014

5. Clean up work	5.1. <i>Materials</i> that can be reused are collected and stored.	
	maintain Equipment	5.2. Waste and scrap are removed following workplace procedures.
		5.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.
		5.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.
		5.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures.
		5.6. <i>Tooling and equipment</i> are maintained in accordance with workplace procedures.

	<ul> <li>International standards</li> <li>verbal and graphical instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
Materials	Materials may include:
	cleaning material
Tooling and	may include:
Equipment	hand tooling

Evidence Guide			
Critical Aspects	of Must demonstrate skills and knowledge competence in:		
Competence	<ul> <li>observing safety procedures and requirements</li> </ul>		
	<ul> <li>communicating effectively with others involved in or affected</li> </ul>	d	
	by the work		
	<ul> <li>selecting methods and techniques appropriate to the</li> </ul>		
	circumstances		
	<ul> <li>completing preparatory activity in a systematic manner</li> </ul>		
	<ul> <li>servicing and maintaining battery storage systems in</li> </ul>		
	accordance with manufacturer/component supplier and site	;	
	requirements		
	<ul> <li>completing inspection in accordance with</li> </ul>		
	manufacturer/component supplier requirements		
	<ul> <li>completing work within workplace timeframes</li> </ul>		
	<ul> <li>completing workplace documents</li> </ul>		
Underpinning	Demonstrates knowledge of:		
knowledge and	<ul> <li>OHS and environmental regulations/requirements,</li> </ul>		
attitude	equipment, material and personal safety requirements		
	<ul> <li>dangers of working with battery testing Equipment</li> </ul>		
	<ul> <li>operating principles and layout of battery storage systems</li> </ul>		
	inspection procedures		
	<ul> <li>service and/or maintenance procedures</li> </ul>		
	<ul> <li>enterprise quality procedure</li> </ul>		
	work organization and planning processes		
Underpinning S	ills Demonstrates skills to:		
	• apply and search interpretive skills sufficient to locate,		
	interpret and apply manufacturer/component supplier		
	procedures, workplace policies and procedures		
	• analytical skills for identification and analysis of technical information		
	<ul> <li>questioning and active listening skills for example when</li> </ul>		
	obtaining information from customers		
	<ul> <li>oral communication skills sufficient to convey information an concepts to customers</li> </ul>	าป	
	<ul> <li>as applied to own work activities, including making good use</li> </ul>	۵	
	of time and resources, sorting out priorities and monitoring	C	
	one's own performance		
	<ul> <li>interacting effectively with other persons both on a one-to-</li> </ul>		
	one basis and in groups, including understanding and		
	responding to the needs of a customer and working		
	effectively as a member of a team to achieve a shared goal		
	<ul> <li>use mathematical ideas and techniques to correctly calculat</li> </ul>	te	
	time, assess tolerances, apply accurate measurements,		
Page 18 of 336	Ministry of Education CopyrightFarm Machinery and Equipment MaintenanceVersionEthiopian Occupational StandardJuly 20	ı 1 )14	

	<ul> <li>calculate material requirements and establish quality checks</li> <li>establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage</li> <li>use workplace technology related to inspection, servicing and maintenance of battery storage systems, including use of specialist tooling, measuring Equipment and communication devices and reporting/documenting of results</li> </ul>
Resource	Access is required to real or appropriately simulated situations,
Implications	including work areas, materials and equipment, and to
	information on workplace practices and OHS practices.
Methods of	Competence may be assessed through:
Assessment	Interview / Written Test
	Observation / Demonstration with Oral Questioning
Context of	Competence may be assessed in the work place or in a
Assessment	simulated work place setting.

Occupational Standard: Farm Machinery and Equipment Maintenance Level I	
Unit Title	Remove and Replace Electrical/Electronic Units/Assemblies
Unit Code	AGR MEM1 05 0714
Unit Descriptor	This unit covers the competence to remove and tag automotive electrical /electronic system components. Work involved includes electrical systems of heavy vehicles road transport, heavy vehicles mobile plant and outdoor power equipment. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Elements	Performance Criteria
1. Prepare to remove and tag automotive electrical/ electronic components	1.1 Nature and scope of work and <i>environmental requirements</i> are identified and confirmed.
	1.2 <b>OHS requirements</b> , including regulatory requirements and <b>personal protection equipment</b> needs are observed throughout the work.
	1.3 <i>Safe operating procedures</i> are applied and information such as workshop manuals and specifications, and tooling are sourced.
	1.4 Method options are analysed and those most appropriate to the circumstances are selected and prepared.
	<ol> <li>1.5 Dangers associated working with removal and tagging of automotive electrical system components is observed.</li> <li>1.6 <i>Emergency procedures</i> are identified and followed as per organization's guideline.</li> </ol>
2. Remove automotive	2.1. Automotive electrical/electronics components for removal are identified.
electrical /electronic system	2.2. <i>Methods</i> for the conduct of removal and tagging are implemented by the <i>regulatory authorities</i> in accordance with manufacturer/component supplier specifications.
components	2.3. Components are removed without damage.
	2.4. Inspection of components is carried out.
	2.5. Report is processed in accordance with enterprise procedures.
3. Tag automotive	3.1 Tagging procedures are identified.
electrical/ electronic	3.2 Resource requirements for tagging are identified and supported.
components	3.3 Tooling and Equipment are identified and prepared.
	3.4 Components are tagged without damage.

Variable		Range		
Environmental requirements		May include but not limited to:		
		<ul> <li>waste management and clean-up management</li> <li>regulations, including international standard internal quality policy and standards and enterprise operations and procedures</li> </ul>		
OHS requirem	ents	are to be in ac	cordance with legislation/ regulations/coc	des of
Page 20 of 336	Minis	stry of Education Copyright	Farm Machinery and Equipment Maintenance Ethiopian Occupational Standard	Version 1 July 2014

	<ul><li>practice and enterprise safety policies and procedures, and may include:</li><li>protective clothing and Equipment, use of tooling and</li></ul>
	Equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
Personal protective	May include but not limited to:
equipment	<ul> <li>Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices</li> </ul>
Safe operating	May include but not limited to:
procedures	<ul> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, electrical safety, equipment movement and operation, manual and mechanical lifting and shifting, and working in proximity to others and site visitors</li> </ul>
	extinguishing fires, enterprise first aid requirements and site evacuation
Emergency	are to include but may not be limited to:
procedures	<ul> <li>emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
Methods	include tagging by title and application
Regulatory authorities	<ul> <li>may include:</li> <li>federal and state authorities administering acts, regulations and codes of practice</li> </ul>
Tooling and	may include:
Equipment	<ul> <li>hand tooling and hand held power tooling</li> </ul>

Evidence Guide		
Critical Aspects of Competence	<ul> <li>Must demonstrate skills and knowledge competence in:</li> <li>observing safety procedures and requirements</li> <li>communicating effectively with others involved in or affected by the work</li> <li>selecting methods and techniques appropriate to the circumstances</li> <li>completing preparatory activity in a systematic manner</li> <li>identifying, removing and tagging a range of components by their title and application</li> <li>conducting removal and tagging without damage to components or tooling and equipment</li> </ul>	
Underpinning knowledge and attitude	<ul> <li>Must demonstrate skills to:</li> <li>OHS regulations/requirements, equipment, material and personal safety requirements</li> <li>automotive electrical terminology</li> <li>function of each component</li> <li>connection of body components to each other</li> <li>application of body components</li> <li>removal procedures</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level I			
Unit Title	Operate a Personal Computer		
Unit Code	AGR MEM1 06 0714		
Unit Descriptor	This unit describes the performance outcomes, skills and		
	knowledge required to start up a personal computer or business		
	computer terminal; to correctly navigate the desktop		
	environment; and to use a range of basic functions.		

Elements	s Performance Criteria	
1. Start computer, system information and	1.1	Workspace, furniture and equipment are adjusted to suit user <i>ergonomic requirements</i>
features	1.2	<i>Work organization</i> is ensured to meet organizational and <i>Occupational Health and Safety</i> ( <i>OHS</i> ) <i>requirements</i> for computer operation
	1.3	Computer is started or logged on according to user procedures
	1.4	Basic functions and features are identified using system information
	1.5	Desktop configuration is customised, if necessary, with assistance from appropriate persons
	1.6	Help functions are used as required
2. Navigate and manipulate desktop	2.1	Features are opened, closed and accessed by selecting correct <i>desktop icons</i>
environment	2.2	Desktop windows are opened, resized and closed by using correct window functions and roles
	2.3	Shortcuts are created from the desktop, if necessary, with assistance from appropriate persons
3. Organize files	3.1	Folders/subfolders are created with suitable names
directory and	3.2	Files are saved with suitable names in appropriate folders
folder structures	3.3	Folders/subfolders and files are renamed and moved as required
	3.4	Folder/subfolder and file attributes are identified
	3.5	Folders/subfolders and files are moved using cut and paste, and drag and drop techniques
	3.6	Folders/subfolders and files are saved to <i>appropriate media</i> where necessary
	3.7	Folders/subfolders and files are searched for using appropriate software tools
	3.8	Deleted folder/subfolders and files are restored as necessary
4. Print information	4.1	Information is printed from installed printer
	4.2	Progress of print jobs is viewed and deleted as required
	4.3	Default printer is changed if installed and required

Page 23 of 336         Ministry of Education Copyright         Farm Machinery and Equipment Maintenance         Version

5. Sh	Shut down	5.1	All open applications are closed
	compator	5.2	Computer is shut-down according to user procedures

Variable	Range	
Ergonomic	may include but not limited to:	
requirements	<ul> <li>avoiding radiation from computer screens</li> </ul>	
	<ul> <li>chair height, seat and back adjustment</li> </ul>	
	document holder	
	footrest	
	<ul> <li>keyboard and mouse position</li> </ul>	
	lighting	
	noise minimisation	
	posture	
	screen position	
	workstation height and layout	
Work organization	may include but not limited to:	
	exercise breaks	
	mix of repetitive and other activities	
	rest periods	
	<ul> <li>visual display unit (VDU) eye testing</li> </ul>	
Occupational	may include but not limited to:	
Health and Safety	• OHS guidelines related to the use of the screen Equipment,	
(OHS)	computing Equipment and peripherals, ergonomic work	
requirements	stations, security procedures, customisation requirements	
	statutory requirements	
Desktop icons	may include but not limited to:	
	directories/folders	
	• files	
	network devices	
	recycle bin and waste basket	
File attributes	may include but not limited to:	
	dates	
	• size	
Appropriate media	may include but not limited to:	
	• CDs	
	diskettes	
	local hard drive	
	<ul> <li>other locations on a network</li> </ul>	
	USB/ Flash/Thumb drives	
	• zip disks	

Evidence Guide		
Critical aspects of Competence	<ul> <li>Must demonstrate knowledge and skills competence of:</li> <li>navigation and manipulation of the desktop environment within the range of assigned workplace tasks</li> <li>knowledge of organizational requirements for simple documents and filing conventions</li> <li>application of simple keyboard functions to produce documents with a degree of speed and accuracy relevant to the level of responsibility required</li> </ul>	

Page 24 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

Underpinning	Demonstrate knowledge of:	
Knowledge and	<ul> <li>key provisions of relevant legislation from all levels of</li> </ul>	
Attitudes	government that may affect aspects of business operations,	
	such as:	
	> OHS	
	basic ergonomics of computer use	
	main types and parts of computers, and basic features of	
	different operating systems	
	suitable file naming conventions	
Underpinning Skills Demonstrate skills of:		
	literacy skills to identify work requirements, to comprehend	
	basic workplace documents, to interpret basic user manuals	
	and to proofread simple documents	
	communication skills to identify lines of communication, to	
	request advice, to effectively question, to follow instructions	
	and to receive feedback	
	<ul> <li>problem-solving skills to solve routine problems in the</li> </ul>	
	workplace, while under direct supervision	
	<ul> <li>technology skills to use Equipment safely while under</li> </ul>	
	direction, basic keyboard and mouse skills and procedures	
	relating to logging on and accessing a computer	
	basic typing techniques and strategies	
Resource	Access is required to real or appropriately simulated situations,	
Implications	including work areas, materials and equipment, and to	
	information on workplace practices and OHS practices.	
Methods of	Competence may be assessed through:	
Assessment	Interview / Written Test	
	Observation / Demonstration with Oral Questioning	
Context of	Competence may be assessed in the work place or in a	
Assessment	simulated work place setting.

Occupational Standard: Farm Machinery and Equipment Maintenance Level I	
Unit Title	Remove and Tag Transmission System Components
Unit Code	AGR MEM1 09 0714
Unit Descriptor	This unit covers the competence to remove and tag transmission system assembly. Work involved includes transmissions of farm machineries components Work requires individuals to demonstrate minimal judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

Elements	Performance Criteria
1. Prepare to remove and tag transmission	1.1 Workplace <i>information sources</i> are accessed and procedures strictly adhered to.
system assembly	1.2 Nature and scope of work and <i>environment requirements</i> are identified and confirmed.
	1.3 <b>OHS requirements</b> , including regulatory requirements and personal protection needs are observed throughout the work.
	1.4 <b>Safe protecting procedures</b> and information such as workshop manuals and specifications, and tooling required, are sourced.
	1.5 Method options are analysed and those most appropriate to the circumstances are selected and prepared.
	1.6 Dangers associated working with the removal and tagging of transmission system assembly is observed.
	1.7 <i>Emergency procedures</i> are identified and followed as per organization's guideline.
2. Remove	2.1. <i>Transmission system</i> assembly for removal are identified.
system assembly	2.2. Methods for the removal and tagging are implemented in accordance with manufacturer supplier specifications.
	2.3. Assembly are removed without damage.
	2.4. Inspection is carried out.
	2.5. Report is processed in accordance with workplace procedures.
3. Tag	3.1. Tagging procedures are identified.
system assembly	3.2. Resource requirements for tagging are identified and support Equipment is identified and prepared.
	3.3. Assemblies are tagged without damage.

Variable	Range
Information sources	<ul> <li>may include:</li> <li>enterprise operating procedures, workshop manuals, supplier data sheets, parts catalogues, customer orders and industry/workplace codes of practice, material safety data sheets and International Design Rules</li> <li>safe work procedures related to removing and tagging transmission system assembly</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level I		
Unit Title	Apply Quality Standards	
Unit Code	AGR MEM1 11 0714	
Unit Descriptor	This unit covers the knowledge, attitudes and skills required in applying quality standards in the operational activities.	
Elemente	Deviewmence Criterie	
Elements	Performance Criteria	
I. ASSESS OWN WORK	<ol> <li>Completed work is checked against organization standards relevant to the activity being undertaken.</li> </ol>	
	1.2 An understanding is demonstrated on how the work activities are completed and work relate to the next process and to the final appearance of the service / product.	
	<ol> <li>Faulty service is identified and isolated in accordance with policies and procedures.</li> </ol>	
	1.4 Faults and any identified causes are recorded and reported in accordance with standard procedures.	
2. Assess quality of service	2.1 Services rendered quality is <i>checked</i> against standards and specifications.	
rendered	2.2 Service rendered are evaluated using the appropriate evaluation parameters and in accordance with standards.	
	2.3 Causes of any identified faults are identified and corrective actions taken in accordance with policies and procedures.	
3. Record information	3.1 Basic information on the quality performance is recorded in accordance with organization procedures.	
	3.2 Records of work quality are maintained according to the requirements of the organization / enterprise.	
4. Study causes of quality deviations	4.1 Causes of deviations from final outputs or services are investigated and reported in accordance with standard procedures.	
	4.2 Suitable preventive action is recommended based on organization <i>quality standards</i> and causes of deviation from specified quality standards of final service or output. are identified	
5. Complete documentation	5.1 Information on <i>quality parameters</i> and other indicators of service performance is recorded.	
	5.2 All service processes and outcomes are recorded.	

Variable	Range
Quality check	May include but not limited to:
	Visual inspection
	Physical measurements
	Check against specifications/preferences
Quality standards	May include but not limited to:
	materials
	service

Occupational Standard: Farm Machinery and Equipment Maintenance Level I		
Unit Title	Develop Understanding of Entrepreneurship	
Unit Code	AGR MEM1 15 0714	
Unit Descriptor	This unit covers skills, knowledge and attitude required to understand the principles, functions, strategies and methods of entrepreneurship. It also covers identifying and developing the major entrepreneurial competences.	

Elements	Performance Criteria
1. Describe and explain the	1.1 The principles, concept and terminology of entrepreneurship are analyzed and discussed.
principles, concept and scope of	1.2 The different / various forms of enterprises in the community are identified and their roles understood.
chitepieneurship	1.3 The identified enterprises are categorized and <i>classified</i> .
	1.4 The terms and elements involved in the concept of enterprising, both on a personal level and in the context of being enterprising in business are identified and interpreted.
	1.5 Functions of entrepreneurship in business and how the entrepreneurs improved business and economic environment are explained.
2. Discuss how to become entrepreneur	2.1 Self-employment is discussed and analyzed as an alternative option for an individual economic independence and personal growth.
	2.2 Advantages and disadvantages of self-employment are discussed and explained.
	2.3 Entrepreneurial characteristics and traits are identified and discussed.
	2.4 Self-potential is assessed to determine if qualified to become future entrepreneur.
	2.5 Major competences of successful entrepreneurship are identified and explained.
3. Discuss how to organize an enterprise	3.1 The importance and role of business entrepreneurship in the society are discussed and correlated to the operations of the economy.
	3.2 Facts about small and medium enterprises are discussed, clarified and understood.
	3.3 Key success factors in setting up small and medium business are identified and explained.
	3.4 Business opportunities are identified and assessed.
	3.5 Business ideas are generated using appropriate tools, techniques and steps.
	3.6 Procedures are discussed and understood for identifying suitable market for business.

---	------------------------

Occupational Standard: Farm Machinery and Equipment Maintenance Level II			
Unit Title	Implement and Monitor Environmental Regulations in the Farm Machinery Mechanical Industry		
Unit Code	AGR MEM2 01 0714		
Unit Descriptor	This unit covers the competence to undertake service or repair of Farm machinery and equipment or their components in a manner that ensures the protection of the environment. Work involves activities of a farm machinery specialist workplace or business, including service, removal, repair or fitting of mechanical components for farm machinery and equipment.		

Elements	Per	Performance Criteria		
<ol> <li>Implement environment regulations</li> </ol>	1.1	Workplace <i>information</i> sources are accessed and procedures strictly adhered.		
	1.2	Reasons are identified for ethical <i>environmental requirement</i> practices in a <i>farm machinery mechanical workplace or business</i> .		
	1.3	Environmental requirements are observed and precautions implemented according to workplace and environmental protection regulation or guidelines.		
	1.4	Occupational Health and Safety (OHS) requirements including regulatory requirements and Personal Protective equipment (PPE) are observed and followed consistently in according to workplace requirements.		
	1.5	Environmental responsibilities of staff in farm machinery workplace or business are identified.		
	1.6	enalties for individual breaches of legislation are identified.		
	1.7	Waste is minimised, waste <i>materials</i> , including sludge, solids and other wastes are sorted and stored in bins for recycling or disposal.		
	1.8	Packaging on goods received is sorted and reused or disposed of to recycling.		
2. Monitor and av hazards to	void 2.1	No waste water or contaminants is/are allowed to enter stormwater systems.		
stormwater	2.2	Surface cleaning, engine degreasing and preparation are undertaken in an impervious paved area and do not contaminate stormwater.		
	2.3	Parts and components containing environmentally hazardous material are stored under cover in a sealed and bundled or drained treatment area.		
	2.4	Liquid wastes are drained into storage or recycling containers.		
	2.5	Parts washing are undertaken in an approved parts washer that does not cause contamination of stormwater or ground.		
	2.6	Spill kit is located and used as needed to prevent stormwater contamination.		
Page 57 of 336Ministry of Education CopyrightFarm Machinery and Equipment Maintenance Ethiopian Occupational Standard		Education rightFarm Machinery and Equipment Maintenance Ethiopian Occupational StandardVersion 1 July 2014		

	2.7	Drip trays are used under vehicles when chance of spillage or leakage is present.
	2.8	Spills are cleaned up immediately and workplace is kept clean to prevent unintentional stormwater pollution.
	2.9	Hands are cleaned over drains connected to an oil/water separator or drums for collecting liquid waste.
	2.10	) Spills are cleaned up immediately and workplace is kept clean to prevent unintentional stormwater pollution.
3. Monitor and avoid hazards to air	3.1	Vehicle exhausts and emissions are minimised and not permitted to collect in the workplace.
quality	3.2	Hazards of airborne particles are monitored, minimised and contained.
	3.3	Hazards of gases are monitored, minimised and contained.
	3.4	Welding is conducted in a well-ventilated area.
	3.5	Noise generating activities are minimised and carried out within approved operating hours.

Variable		Range				
Information		<ul> <li>may include:</li> <li>environmental legislation, regulations and advice</li> <li>workplace procedures relating to the use of tooling and equipment</li> <li>work instructions, including job sheets</li> <li>workplace procedures relating to documenting and communication of environmental issues</li> <li>manufacturer/component supplier specifications and operational procedures</li> <li>site environmental policy</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level II		
Unit Title	Interpret Working Drawings and Sketches	
Unit Code	AGR MEM2 02 0714	
Unit Descriptor	This unit covers the competencies required to read and interpret drawings and sketches. It requires interpretations of standard drawings by using symbols, dimensional tolerances and notations.	

Elements		Per	formance Criteria
1. Identify		1.1	Drawing is checked and validated against job requirements.
	technical drawing	1.2	Drawing version is checked and validated.
	drawing	1.3	Instructions are confirmed and followed as required.
2.	Identify views,	2.1	Orthographic and isometric <i>drawing</i> is identified.
	standard	2.2	Orthographic and isometric views are explained.
	lines	2.3	Alphabet of lines is identified.
		2.4	Uses of the alphabet of lines are explained.
		2.5	Codes and symbols are correctly identified and explained according to drawing standards.
3.	Interpret	3.1	Component, assembly or object is recognized as required.
	technical 3. drawing 3.	3.2	Drawing symbols and codes are interpreted appropriately.
		3.3	Dimensions and material requirements are identified, understood and followed as required.
		3.4	Dimensional <i>tolerances</i> and notations are interpreted according to specifications.

Variables	Range		
Drawing	May include but not limited to:		
	Perspective		
	Exploded view		
	Hidden view technique		
Tolerance	May include but not limited to:		
	General tolerance		
	Angular tolerance		
	Geometric tolerance		
Projections	May include but not limited to:		
	First angle projections		
	Third angle projections		
Tools and	May include but not limited to:		
equipment	<ul> <li>set square, T-square, compass, divider</li> </ul>		
	<ul> <li>different types of drawing paper</li> </ul>		
	pencil		
	drawing board		
	masking tape

Occupational standard: Farm Machinery and Equipment Maintenance Level II		
Unit Title	Test and Repair Electrical/Electronic Units/Assemblies and Low Voltage	
Unit Code	AGR MEM2 03 0714	
Unit Descriptor	This unit covers competence to remove and replace units/assemblies, such as headlights, tail-lights, electrical components, carry out lighting installations, testing and repair to low voltage systems appropriate to vehicles and trailers .and computer control units to facilitate body repair activities. The unit includes identification and confirmation of work requirement, preparation for work, removal and replacement of electrical and electronic units/assemblies and completion of work finalisation processes, including clean-up and documentation.	

Elements		Per	formance C	riteria	
1.	Prepare for work	1.1	Work instru requiremer	nctions and <i>information</i> are used to detents, including method, material and equip	rmine job nent.
		1.2	Job specifi	cations are read and interpreted.	
			<i>OHS requi</i> breathing a <i>Equipmen</i>	<b>rements</b> , including dust and fume collect pparatus and eye and ear <b>Personal Pro</b> <b>t (PPE)</b> needs are observed throughout t	ion, <b>tection</b> he work.
		1.4	<i>Material</i> ap	ppropriate to application for work is select	ed.
		1.5	Equipmen and effective	<i>t and tooling</i> are identified and checked ve operation.	for safe
		1.6	Safe operative waste mate	<b>ating procedures</b> are determined to mini erial.	mise
		1.7	Procedures while comp	are identified for maximising energy efficient of the second second second second second second second second s	ciency
2.	Remove electrical/ electronic units/ assemblies	2.1	Correct info manufactur	ormation is accessed and interpreted fron rer/component supplier specifications.	1
		2.2	<i>Electrical/</i> approved n	<b>electronic units/assemblies</b> are remove nethods, tooling and equipment.	ed using
		2.3	Removal is or system.	completed without causing damage to co	omponent
		2.4	Removal a regulations procedures	ctivities are carried out according to indus /guidelines, OHS, legislation and enterpri /policies.	stry se
		2.5	Units/asser manufactur	mblies are handled and stored in accorda rer/component supplier requirements.	nce with
3.	Install wiring/lighting electrical systems	3.1	Information supplier sp	is accessed from manufacturer/compone ecifications and correctly interpreted.	ent
		3.2	Componen and prepar supplier ins	ts, tooling and equipment are identified, s ed in accordance with manufacturer/com structions and site procedures.	elected, ponent
		3.3	Wiring/light installation	ing circuit plans and designs are followed procedures completed in accordance wit	l and h site

			procedures and manufacturer/component supplier specifications.	
		3.4	Legislation, industry guidelines and enterprise policies/ procedures are followed.	
		3.5	Undue damage to equipment or equipment is avoided.	
4.	Repair and replace electrical/	4.1 ( I	Correct information is accessed and interpreted from manufacturer/component supplier <i>critical specifications</i> .	
	electronic units/ assemblies and	4.2 Electrical units/assemblies are replaced using approved methods, tooling and equipment.		
	Systems	4.3	Replacement is completed without causing damage to component or system.	
		4.40	Components, tooling and equipment are identified, selected, and prepared in accordance with manufacturer/ component supplier instructions and site procedures.	
		4.5	Repair work is completed in accordance with site procedures.	
		4.6 I	Workplace documents are completed in accordance with site requirements.	
		4.7	Replacement activities are carried out according to industry regulations/guidelines, OHS, legislation and <i>enterprise</i> procedures and policies.	
5.	Test electrical systems	5.1	Information is accessed from manufacturer/component supplier specifications and correctly interpreted.	
		5.2	All tests are carried out in accordance with manufacturer/component supplier specifications and tolerances.	
		5.3	Testing is completed without causing damage to component or system.	
6.	Clean up work	6.1	Material that can be reused is collected and stored.	
	maintain equipment	6.2	Waste and scrap are removed by following workplace and environmental procedures.	
		6.3	Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.	
		6.4	Unserviceable equipment is tagged and faults are identified in accordance with <i>environmental requirements</i> .	
		6.5	Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures.	
		6.6	Equipment is maintained in accordance with workplace procedures.	

Variable	Range

Occupational Stand	dard: Farm Machinery and Equipment Maintenance Level II
Unit Title	Repair and Overhaul Starting and Charging Systems/Components
Unit Code	AGR MEM2 04 0714
Unit Descriptor	This unit covers the skills and knowledge required to test, repair and overhaul charging and starting systems appropriate to farm machineries, plant and equipment, and outdoor power equipment. The unit also includes identification and confirmation of work requirement, preparation for work, testing of alternators and starters, and identification of faults/causes, disassembly, overhaul, reassembly and retesting and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment. The unit applies to individuals who undertake testing and identification of faults/causes, repair and retesting of charging and starting systems.

Elements	Per	formance Criteria
1. Prepare for work	1.1	Job requirements, including method, processes and equipment are determined.
	1.2	Workplace <i>information sources</i> are accessed and procedures strictly adhered.
	1.3	Job specifications are read and interpreted.
	1.4	Correct information is accessed from manufacturer/ component supplier specifications and interpreted.
	1.5	<i>Equipment and tooling, materials</i> are identified and checked for effective and safe operation.
	1.6	Procedures are determined to minimise task time.
2. Dismantle starting motors	2.1	Correct information is accessed and interpreted from manufacturer/component supplier specifications.
and clean individual components/ parts	2.2	<i>Occupational Health and Safety (OHS) requirements</i> including regulatory requirements and <i>Personal Protective</i> <i>equipment (PPE)</i> are observed and followed consistently in according to workplace requirements.
	2.3	<i>Safe operating procedures</i> are observed and noted during the use of tools/ equipment in accordance with workplace guidelines.
	2.4	<i>Mechanical starting systems</i> motors are dismantled according to component/vehicle manufacturer/component supplier procedures.
	2.5	<i>Electrical starting systems</i> motors are dismantled without causing damage to component.
	2.6	Component parts are cleaned according to unit/vehicle manufacturer/component supplier recommended solvents

			and procedures.
		2.7	All works are completed according to industry regulations/guidelines, OHS, legislation and enterprise procedures/policies.
3.	Test systems/ components and identify faults	3.1	Occupational Health and Safety (OHS) requirements, including personal safety needs are observed throughout the work.
		3.2	<i>Emergency procedures</i> are identified and followed as per organization's guideline.
		3.3	Tests are carried out to determine <i>faults</i> using appropriate tooling and techniques.
		3.4	Tests are completed without causing damage to component or system.
		3.5	Faults are identified and preferred <i>repair method</i> is determined.
		3.6	Tests are completed according to industry regulations/ guidelines, OHS, legislation and enterprise procedures and policies.
4.	Repair starting and charging systems and associated components	4.1	Repairs, component replacement and adjustments are carried out to manufacturer/component supplier specifications.
		4.2	Appropriate tooling, techniques and materials are selected and used.
		4.3	Starting and charging systems are repaired without causing damage to component or system.
		4.4	Retests are performed to ensure correct and safe starting and charging system operation, according to industry regulations/guidelines, OHS, legislation and <i>organizational</i> <i>procedures and policies</i> .
		4.5	Workplace and equipment documents are completed in accordance with <i>environmental requirements</i> .
5.	Clean up work area and maintain equipment	5.1	Material that can be reused is collected and used.
		5.2	Waste and scrap are removed by following workplace procedures.
		5.3	Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.
		5.4	Unserviceable equipment is tagged and faults are identified in accordance with workplace requirements.
		5.5	Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures.
		5.6	Tooling and equipment are maintained and stored in accordance with workplace procedures.

Resources	Access is required to real or appropriately simulated situations,
Implication	including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Methods of	Competency may be accessed through:
Assessment	Interview / Written Test
	Observation / Demonstration with Oral Questioning
Context of	Competency may be assessed in the work place or in a
Assessment	simulated work place setting.

Page 76 of 336Ministry of Education CopyrightFarm Machinery and Equipment Maintenance Ethiopian Occupational StandardVersion July 20	on 1 2014
---	--------------

Occupational Standard: Farm Machinery and Equipment Maintenance Level II			
Unit Title	Perform Manual Arc and Oxy Acetylene Welding		
Unit Code	AGR MEM2 05 0714		
Unit Descriptor	This unit of competency covers the skills and knowledge required to carry out manual metal arc and routine oxy acetylene welding procedures. The unit includes identification and confirmation of work requirement, preparation for work and the completion of welding and work finalisation processes, including clean-up and documentation.		

Elements		Perf	ormance Criteria
1.	Identify weld	1.1	Weld requirements are identified from job instructions.
	requirements	1.2	Location of welds is identified in accordance with standard operating procedures and job specifications.
2.	Prepare for work	2.1	Work instructions are used to determine job requirements, including job sheets, quality and quantity of <i>materials</i> .
		2.2	Job specifications are read and interpreted.
		2.3	OHS requirements, including Personal Protection Equipment (PPE) needs are observed throughout the work.
		2.4	Materials for repairs and replacements are selected, cleaned and inspected for quality and prepared ready for welding
		2.5	Hand, power tooling and safety equipment are identified, set up correctly and checked for safe use.
		2.6	Products are determined to minimise waste material.
		2.7	Procedures are identified for maximising energy efficiency while completing the job.
3.	Carry out manual metal arc procedures	3.1	<i>Information</i> is accessed from sources to enable welding to be performed in accordance with vehicle and equipment manufacturer/component supplier procedures.
		3.2	<i>Manual metal arc welding</i> is completed using approved methods and equipment according to type of material and repairs required.
		3.3	Manual metal arc welding procedures are completed without causing damage to component or system
		3.4	Manual metal arc welding is carried out according to a standard that meets industry regulations/guidelines, OHS requirements, legislation and enterprise policy/procedures.
4.	Perform routine welding using	4.1	Safe welding practices are applied according to the <i>safe</i> operating procedures.
	oxy acetylene	4.2	Materials are welded to job requirements.
		4.3	Welds are <i>cleaned</i> in accordance with standard operating procedures.

Page 77 of 336         Ministry of Education	ersion 1

5. Clean up work	5.1	Material that can be reused is collected and stored.
area and maintain equipment	5.2	Waste and scrap are removed following workplace procedures.
oquipmont	5.3	Equipment and work area are cleaned and inspected for serviceable conditions in accordance with workplace procedures.
	5.4	Unserviceable equipment is tagged and faults are identified in accordance with workplace procedures.
	5.5	Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.
	5.6	Tooling is maintained in accordance with workplace procedures.

Variable	Range		
Materials	<ul> <li>may include:</li> <li>rods/electrodes and cleaning materials</li> <li>mild and low carbon steel and cast iron</li> <li>filler rods, fluxes</li> </ul>		
OHS requirements	<ul> <li>Are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:</li> <li>protective clothing and equipment</li> <li>use of tooling and equipment</li> <li>workplace environment and safety</li> <li>handling of material</li> <li>use of fire fighting equipment, enterprise first aid</li> <li>hazard control and hazardous material and substances</li> </ul>		
Personal Protection Equipment (PPE)	is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices		
Information	<ul> <li>may include:</li> <li>verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>safe work procedures related to manual metal arc welding</li> <li>regulatory/legislative requirements pertaining to automotive industry, including Ethiopian Design Rules</li> <li>engineer's design specifications and instructions</li> <li>organisation work specifications and requirements</li> <li>instructions issued by authorised enterprise or external persons</li> <li>Ethiopian standards</li> </ul>		
Manual metal arc welding method	<ul> <li>are to include:</li> <li>equipment selection and preparation,</li> <li>material selection/ confirmation and preparation,</li> <li>the application of welding techniques and the operator maintenance of equipment</li> </ul>

---	------------------------

Safe operating	Are to include, but are not limited to:				
procedures	• operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, equipment movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors				
	• emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation				
Job requirements	are to include, but are not limited to:				
	<ul> <li>waste management, noise, dust and clean-up management</li> <li>regulations, including Ethiopian standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>				
Cleaning	May include:				
	Fluxes				
Tooling and equipment	may include:				
	hand tooling				
	welding equipment including:				
	manual metal arc welding machines,				
	safety equipment,				
	measuring equipment,				
	marking out equipment and lifting equipment ,				
	hoses, blowpipes, regulators				
Prepared	May include:				
	• preheating				
	setting up jigs				
	• fixtures				
	• clamps				
	joint preparation				
Oxy acetylene	May include:				
	• The term 'oxy-acetylene' is used here to describe a range of				
	fuel gases, including acetylene, LPG, hydrogen etc.				
Communications	are to include, but are not limited to:				
	verbal and visual instructions and fault reporting and may				
	include:				
	worksite specific instructions				
	written instructions				
	plans or instructions related to job/task				
	<ul> <li>telephones and pagers</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level II			
Unit Title	Inspect, Service and Repair Braking Systems		
Unit Code	AGR MEM2 06 0714		
Unit Descriptor	This unit covers the competence required to carry out inspection servicing, and repair of braking systems and associated components. It includes engine and exhaust brakes and retarders. The unit includes identification and confirmation of work requirement, preparation for work, inspection, analysis and servicing of braking systems and completion of work finalisation processes, including clean-up and documentation.		

Elements	Performance Criteria			
1. Prepare to undertake	1.1 Natu conf	ure and scope of work requirements are identified and irmed.		
inspection of braking systems	1.2 Wor proc	kplace information sources are accessed and edures strictly adhered.		
	1.3 <b>OH</b> regu	<b>3 requirements</b> , including individual and state latory requirements and <b>personal protective</b> <b>ipment</b> needs are observed throughout the work.		
	1.4 Proc work requ	cedures and <i>information</i> are sourced such as (shop manuals and specifications and tooling as lired.		
	1.5 Meth are	nod options are analysed and those most appropriate selected and prepared to the circumstances.		
	1.6 Rele are work proc	evant <b>tools, equipment and materials</b> requirements identified and made ready for use prior to the start of < practice as per job specification and work place cedures.		
	1.7 Tecl of ai is id	nnical and/or calibration requirements for the inspection r braking systems are sourced and support equipment entified and prepared.		
	1.8 War obse	nings in relation to working with air braking systems are erved.		
2. Conduct inspection and analyse results	2.1 Meti with mar	nods for the inspection are implemented in accordance road safety legislation, <i>workplace procedures</i> and ufacturer/ <i>component</i> supplier specifications.		
	2.2 Insp com non-	ection results are compared with manufacturer/ ponent supplier specifications to indicate compliance or -compliance.		
	2.3 Res infor	ults are documented with evidence and supporting mation and recommendation(s) is/are made.		
	2.4 Rep proc	ort is processed in accordance with workplace edures.		
3. Prepare to service braking	3.1 Proc sour	pedures and information required are identified and reed.		
systems	3.2 Tec	nnical and tool <i>requirements</i> for servicing are identified		
Page 82 of 336 Min	istry of Educa	tion Farm Machinery and Equipment Maintenance Version 1 Ethiopian Occupational Standard July 2014		

		and support equipments prepared.
	3.3	Relevant tools, equipment and materials requirements are identified and made ready for use prior to the start of work practice as per job specification and work place procedures.
4. Carry out servicing braking system	4.1	Methods for the servicing are implemented in accordance with workplace procedures and manufacturer/component supplier specifications.
	4.2	<i>Emergency procedures</i> are identified and followed as per organization's guideline.
	4.3	<i>Environmental requirements</i> are observed and precautions implemented according to workplace and environmental protection regulation or guidelines
	4.4	<i>Safe operating procedures</i> are observed and noted during the use of tools/ equipment in accordance with workplace guidelines.
	4.5	Service and repair adjustments are made during the work in accordance with manufacturer/component supplier specifications.
	4.6	Brakes are tested for normal operation against manufacturer/component supplier specifications following the service and repair.
	4.7	Adjustments are made during the service to standard quality requirements.
5. Prepare equipment for	5.1	Service schedule documentation is completed and communicated to appropriate personnel.
use or storage	5.2	Final inspection is made to ensure protective guards, safety features and cowlings are in place.
	5.3	Final inspection is made to ensure work is to workplace expectations.
	5.4	Equipment is cleaned for use or storage to workplace expectations.
	5.5	Job card is processed in accordance with workplace procedures.

Variable		Range			
OHS requirements		Are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include :

Occupational Standard: Farm Machinery and Equipment Maintenance Level II		
Unit Title	Inspect and Service Hydrostatic and Automatic Transmissions	
Unit Code	AGR MEM2 07 0714	
Unit Descriptor	This unit covers the competence required to carry out the inspection and service of semi-automatic, automatic and hydrostatic transmissions and associated components, including torque converters in farm machinery service and/or repair context. The unit includes identification and confirmation of work requirement, preparation for work, inspection, analysis, servicing and testing of automatic transmissions and completion of work finalisation processes, including clean-up and documentation.	

Elements	Performance Criteria
1. Prepare to inspect semi-	1.1 Nature and scope of work <i>requirements</i> are identified and confirmed.
automatic, automatic and hydrostatic transmission	1.2 <b>OHS requirements</b> , including regulatory requirements and <b>Personal Protective Equipment</b> needs are observed throughout the work.
	<ol> <li>Workplace information sources are accessed and procedures strictly adhered to.</li> </ol>
	1.4 Procedures and <i>information</i> such as workshop manuals and specifications and tooling are sourced as required.
	1.5 <i>Methods</i> appropriate to the circumstances are selected and prepared in accordance with standard operating procedures.
	<ol> <li>Resources required are sourced for the inspection of transmissions and support equipment is identified and prepared.</li> </ol>
	1.7 Relevant <i>tools, equipment and materials</i> requirements are identified and made ready for use prior to the start of work practice as per job specification and work place procedures.
	1.8 Warnings are observed in relation to working with transmissions.
2. Conduct inspection and analyse results	2.1 Inspection is implemented in accordance with workplace procedures and manufacturer/ component supplier specifications.
	2.2 Inspection results are compared with manufacturer/ component supplier specifications to indicate compliance or non-compliance.
	2.3 Results are documented with evidence and supporting information and recommendation is made.
	2.4 Report is processed in accordance with workplace procedures.

Occupational Standard: Farm Machinery and Equipment Maintenance Level II		
Unit Title	Service and Repair Driveline Components	
Unit Code	AGR MEM2 10 0714	
Unit Descriptor	This unit covers the competence required to carry out the servicing, removing, repairing and refitting of driveline components in farm machinery retail, service and/or repair context. The unit includes identification and confirmation of work requirement, preparation for work, inspection of drivelines, the analysis of inspections results, servicing of drivelines and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.	

Elements Performance Criteria		
1. Prepare to undertake	1.1 Nature and scope of work requirements are identified and confirmed.	
inspections and servicing of drivelines	1.2 <b>OHS requirements</b> , including regulatory requirements and <b>Personal Protective Equipment</b> needs are observed throughout the work.	
	1.3 Procedures and <i>information are sourced</i> such as workshop manuals and specifications, and <i>tool, equipment</i> and <i>materials</i> required.	
	1.4 Methods appropriate to the circumstances are selected and prepared in accordance with standard safe <i>operating procedures.</i>	
	1.5 Resources required for inspection and servicing of drivelines are sourced and support equipment is identified and prepared.	
	1.6 Tools, equipment and materials requirements are identified and made ready for use prior to the start of work practice as per job specification and work place procedures.	
	1.7 Warnings are observed in relation to working with rotating devices.	
2. Conduct inspections and analyse results	2.1 Inspections are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications.	
	2.2 Inspection results are compared with manufacturer/ component supplier specifications to indicate compliance or non-compliance.	
	2.3 Results are documented with evidence and supporting information and recommendation(s) made	
	2.4 Report is forwarded to persons for action in accordance with workplace procedures.	
3. Carryout driveline repair	3.1 <i>Emergency procedures</i> are identified and followed as per organization's guideline.	
Page 102 of 336 Minis	try of Education Farm Machinery and Equipment Maintenance Version 1 Copyright Ethiopian Occupational Standard July 2014	

		3.2	<i>Environmental requirements</i> are observed and precautions are implemented according to workplace and environmental protection regulation or guidelines.
		3.3	Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications.
		3.4	Adjustments are made during the repair work in accordance with manufacturer/component supplier specifications.
4.	Carry out service	4.1	Service is implemented in accordance with workplace procedures and manufacturer/component supplier specifications and <i>quality requirements</i> .
		4.2	Adjustments are made during the service in accordance with manufacturer/component supplier specifications.
5.	Prepare	5.1	Service/repair schedule documentation is completed.
	equipment/ vehicle for use	5.2	Final inspection is made to ensure protective guards, safety features and cowlings are in place.
	of storage	5.3	Final inspection is made to ensure work is to workplace expectations.
		5.4	Equipment/vehicle is cleaned for use or storage to workplace expectations.
		5.5	Job card is processed in accordance with workplace procedures.
		5.6	Accomplishment are recorded, documented and <i>communicated</i> to relevant personnel according to enterprise policies and procedures.

Occupational Standard: Farm Machinery and Equipment Maintenance Level II		
Unit Title	Inspect and Service Hydraulic Systems	
Unit Code	AGR MEM2 12 0714	
Unit Descriptor	This unit covers the competence required to carry out the inspection and servicing of hydraulic systems. The unit includes identification and confirmation of work requirement, preparation for work, testing of systems, analysis of results and servicing of hydraulic systems and completion of work finalisation processes, including clean-up and documentation. Work involves vehicles fitted with hydraulic systems that are lifting and supporting nature.	

Elements	Performance Criteria		
1. Prepare to undertake	1.1 Nature and scope of work requirements are identified and confirmed.		
testing and servicing of bydraulic	1.2 Workplace <i>information sources</i> are accessed and procedures strictly adhered.		
systems	1.3 <b>OHS requirements</b> including regulatory requirements and <b>personal protective needs</b> are observed throughout the work.		
	1.4 Procedures and information such as workshop manuals and specifications and <i>tooling, equipment</i> and <i>materials</i> are sourced as required.		
	1.5 Method options are analyzed and those most appropriate to the circumstances are selected and prepared.		
	1.6 Technical requirements are sourced for testing and servicing of hydraulic systems and support equipment is identified and prepared.		
	1.7 Warnings are observed in relation to working with hydraulics.		
2. Test hydraulic systems and analyse results	2.1 <b>Safe operating procedures</b> are observed and noted during the use of tools/ equipment in accordance with workplace guidelines.		
	2.2 Methods are implemented for the system tests and in accordance with workplace procedures and manufacturer/component supplier specifications.		
	2.3 Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance.		
	2.4 Results are documented with evidence and supporting information and recommendation is made.		
	2.5 Report is processed in accordance with workplace procedures.		
3. Carry out servicing	3.1 Methods are implemented for the service in accordance with workplace procedures and manufacturer/component supplier specifications.

Occupational Standard: Farm Machinery and Equipment Maintenance Level II		
Unit Title	Inspect and Service Engine Systems	
Unit Code	AGR MEM2 14 0714	
Unit Descriptor	This unit covers the competence required to carry out the inspection and service of two and four stroke compression ignition engines. Describes the skills and knowledge required to carry out the inspection and service of air and liquid cooling systems, diesel fuel injection systems, exhaust system, service and/or repair context. The unit includes identification and confirmation of work requirement, preparation for work, inspection and servicing of engines systems and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.	

Elements Performance Criteria	
1. Prepare to undertake the	1.1 Nature and scope of work requirements including method, processes and equipment are identified and confirmed.
inspection and repair of engine	1.2 Workplace <i>information sources</i> are accessed, interpreted and procedures strictly adhered.
byotomo	1.3 <b>OHS requirements</b> including regulatory requirements and <b>Personal Protective Equipment</b> needs are observed throughout the work
	1.4 Procedures and information such as workshop manuals and specifications, and tooling required are sourced.
	1.5 National Environment Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work (applicable to heavy vehicle diesel engine exhaust systems).
	1.6 <i>Methods</i> appropriate to the circumstances are selected and prepared in accordance with standard <i>safe operating</i> <i>procedures</i> .
	1.7 Resources required for <i>inspection of engine systems</i> are sourced and support equipment is identified and prepared.
	1.8 Technical requirements for repairs are sourced and support equipment is identified and prepared.
	1.9 <b>Tools, equipment</b> and <b>materials</b> requirements are identified and made ready for use prior to the start of work practice as per job specification and work place procedures.
	1.10 Warnings are observed in relation to working with engine systems.
2. Prepare for work	2.1 Information is accessed and interpreted from manufacturer/ component supplier specifications and workshop manuals.
	2.2 Equipment and tooling are identified and checked for safe and effective operation.

Occupational Standard: Farm Machinery and Equipment Maintenance Level II				
Unit Title	Service and Repair Agricultural Implements Trailers			
Unit Code	AGR MEM2 15 0714			
Unit Descriptor	This unit of competency describes the skills and knowledge required to service and repair Agricultural implements and load carrying trailers. This unit applies to individuals who undertake and document the adjustment, testing, servicing, repair, attaching and detaching of couplings, hitching draw bars and three point linkages agricultural implements and load carrying trailers of varying types and in varying environments.			

Elements		Per	formance Criteria
1. Prepare for work		1.1	Nature and scope of work to be carried out are confirmed.
		1.2	<b>Occupational Health and Safety (OHS)</b> and workplace environmental and sustainable procedures and practices applicable are identified to the work.
		1.3	Service procedures and relevant workshop manuals and manufacturer <i>information</i> are sourced.
		1.4	Regulations and requirements are accessed and interpreted.
		1.5	<i>Tools, equipment</i> and <i>materials</i> are checked and prepared.
		1.6	Service and/or repair method are decided in accordance with ohs, environmental and industry regulations and guidelines, and enterprise procedures.
		1.7	Work area is set up.
<ol> <li>Adjust implements trailer to su individual applications</li> </ol>	Adjust	2.1	Trailer, implements and axles applications are identified.
	implements and trailer to suit individual applications	2.2	Ascertain ride height is measured in preparation for trailer adjustment.
		2.3	Methods, equipment and tolerances suitable to the trailer application are used in accordance with manufacturer specifications.
		2.4	Adjustment is carried out in accordance with manufacturer and component supplier specifications, and OHS and workplace environmental and sustainable procedures and practices.
3.	Test, service,	3.1	Appropriate diagnostic test is selected.
	repair and/or 3 maintain 3	3.2	Testing of trailer is undertaken.
		3.3	Service is identified, repaired and/or requirements are maintained.
		3.4	Testing <i>servicing, repairing and/or maintenance</i> are carried out using methods, equipment and tolerances suitable to the implementation and trailer application in accordance with manufacturer specifications, OHS, and workplace environmental and sustainable procedures and

Page 124 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

			practices.
4. \	Verify system	4.1	Visual and audible tests are undertaken.
		4.2	Identified issues are repaired and eliminated.
		4.3	Implements and trailers are organized to be test driven.
5. C a	Clean up work area and maintain equipment	5.1	Equipment and tooling are cleaned and inspected according to workplace requirements.
i e		5.2	Unserviceable equipment and faults identified are tagged in accordance with workplace requirements.
		5.3	Work completion documentation, update customer and warranty information are finalized and processed and given to appropriate persons, as required.
		5.4	Work area is cleaned waste and scrap disposed of and re- useable material, tools and equipment are stored in accordance with workplace procedures.

Occupational Standard: Farm Machinery and Equipment Maintenance Level II			
Unit Title	Inspect, Service and Repair Generators and Pumps		
Unit Code	AGR MEM2 16 0714		
Unit descriptor	This unit of competency describes the skills and knowledge required to carry out testing, servicing and repairing of generators and pumps (centrifugal and positive displacement pumping systems). The unit includes identification and confirmation of work requirement, preparation for work, inspection and servicing of generators and pumps and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate discretion, judgement and problem- solving skills in managing own work activities and contributing to a productive team environment.		

Element		Performance Criteria				
1. Prepare to		1.1	Nature a	nd scope of work requirements are confir	med.	
undertake inspection, service and r	enair	1.2	Procedur <i>material</i>	res, information and <i>tooling, equipment</i> and sources are identified as required.	and	
Service and h	epan	1.3	Job spec	ifications are read and interpreted.		
		1.4	Method o circumsta are made	options, those most appropriate to the ances are analysed and selected, and pre e.	eparations	
		1.5	Technica preparati and repa	I and/or calibration requirements are sou on of inspection, <i>pumps generators</i> are ired and equipment is supported.	rced for serviced	
2. Conduct and analyse operational results.		2.1	Workplace <i>requiren</i> and pers work.	Workplace <i>Occupational Health and Safety (OHS)</i> <i>requirements</i> including individual regulatory requirements and personal protection needs are observed throughout the work.		
		2.2	Warnings and gene	Warnings are observed in relation to working with pumps and generators output.		
		2.3	Inspection is performed, <i>serviced and repaired</i> in accordance with workplace procedures and manufacturer/component supplier specifications.			
	2	2.4	<b>Test</b> rest complian	ults are compared with specifications to ir ce or non-compliance.	ndicate	
		2.5	Results a information	are documented with evidence and suppo on and recommendations are made.	orting	
		2.6	Report is with <b>orga</b>	forwarded to persons for action in accord anisational policies and procedures.	dance	
3. Prepare for		3.1	Work to be carried out is confirmed.			
inspection, service and re	epair	3.2	Operational procedures, workshop manuals and manufacturer's <i>information</i> are accessed and interpreted.			
			Tools, ec identified	uipment and materials required for the jo and prepared.	b are

Unit Title	Participate in Workplace Communication	
Unit Code	AGR MEM2 18 0714	
Unit Descriptor	This unit covers the knowledge, skills and attitudes required to gather, interpret and convey information in response to workplace requirements.	

Elements	Performance Criteria
1. Obtain and convey	1.1 Specific and relevant information is accessed from <i>appropriate sources</i> .
information	1.2 Effective questioning, active listening and speaking skills are used to gather and convey information.
	1.3 Appropriate <i>medium</i> is used to transfer information and ideas.
	1.4 Appropriate non- verbal communication is used.
	1.5 Appropriate lines of communication with supervisors and colleagues are identified and followed.
	1.6 Defined workplace procedures for the location and <i>storage</i> of information are used.
	1.7 Personal interaction is carried out clearly and concisely.
2. Participate in	2.1 Team meetings are attended on time.
meetings and discussions	2.2 Own opinions are clearly expressed and those of others are listened to without interruption.
	2.3 Meeting inputs are made consistent with the meeting purpose and <i>protocols</i> established.
	2.4 <i>Workplace interactions</i> are conducted in a courteous manner.
	2.5 Questions about simple routine workplace procedures and matters concerning working conditions of employment are asked and responded.
	2.6 Meetings outcomes are interpreted and implemented.
3. Complete relevant work	3.1 Range of <i>forms</i> relating to conditions of employment is completed accurately and legibly.
documents	3.2 Workplace data is recorded on standard workplace forms and documents.
	3.3 Basic mathematical processes are used for routine calculations.
	3.4 Errors in recording information on forms/ documents are identified and properly acted upon.
	3.5 Reporting requirements to supervisor are completed according to organizational guidelines.

Occupational Standard: Farm Machinery and Equipment Maintenance Level II		
Unit Title	Standardize and Sustain 3S	
Unit Code	AGR MEM2 21 0714	
Unit Descriptor	This unit of competence covers the knowledge, skills and attitudes required by worker to standardize and sustain 3S to his/her workplace. It covers responsibility for the day- to-day operations of the workplace and ensuring that continuous improvements of Kaizen elements are initiated and institutionalized.	

Elements	Performance Criteria
1. Prepare for work.	1.1 Work instructions are used to determine job requirements, including method, material and equipment.
	1.2 Job specifications are read and interpreted following working manual.
	1.3 <b>OHS requirements</b> , including dust and fume collection, breathing apparatus and eye and ear personal protection needs are observed throughout the work.
	1.4 <b>Safety equipment and tools</b> are identified and checked for safe and effective operation.
	1.5 <i>Tools and equipment</i> are prepared and used to implement 3S.
2. Standardize 3S.	2.1 Plan is prepared and used to standardize 3S activities.
	2.2 <b>Tools and techniques</b> to standardize 3S are prepared and implemented based on <b>relevant procedures</b> .
	2.3 Checklists are followed for standardize activities and <i>reported</i> to <i>relevant personnel</i> .
	2.4 The workplace is kept to the specified standard.
	2.5 Problems are avoided by standardizing activities.
3. Sustain 3S.	3.1 Plan is prepared and followed to standardize 3S activities.
	3.2 <b>Tools and techniques</b> to sustain 3S are discussed, prepared and implemented based on relevant procedures.
	3.3 Workplace is inspected regularly for compliance to specified standard and sustainability of 3S techniques.
	3.4 Workplace is cleaned up after completion of job and before commencing next job or end of shift.
	3.5 Situations are identified where compliance to standards is unlikely and actions specified in procedures are taken.
	3.6 Improvements are recommended to lift the level of compliance in the workplace.
	3.7 Checklists are followed to sustain activities and reported to relevant personnel.
	3.8 Problems are avoided by sustaining activities.

Variable	Range

Occupational standard: Farm Machinery and Equipment Maintenance Level III		
Unit Title	Carryout Diagnostic Procedures	
Unit Code	AGR MEM3 01 0714	
Unit Descriptor	This unit covers the competence required to diagnose farm machineries and equipments component faults from different symptoms and to nominate repair action.	

Elements		Per	formance Criteria
1.	Prepare to	1.1	Information is accessed from appropriate sources.
	diagnose faults	1.2	Between "symptoms" and "causes" are differentiated.
		1.3	Fault diagnosis is identified as a process.
		1.4	System(s) is/are familiarized from the area of the fault's origin.
2.	Apply technology to isolate fault(s)	2.1	<i>Diagnosis</i> strategy that can be used to determine a fault is developed within the component/equipment.
		2.2	<i>Diagnostic methods</i> are identified and identification of fault(s) is made from test results.
		2.3	<i>Tools, equipment</i> and <i>materials</i> requirements are identified and made ready for use to isolate fault prior to the start of work practice as per job specification.
		2.4	Findings are confirmed by an alternate route/plan.
		2.5	Faults are diagnosed without causing damage to workplace property, component or equipment.
		2.6	Inspections are carried out according to industry regulations/guidelines, <b>OHS</b> legislation, <b>PPE</b> , legislation and enterprise procedures/policies.
3.	Recommend rectification	3.1	Report of findings is completed in workplace approved format.
	method(s)	3.2	Rectification strategy and consequences of ignoring strategy are identified are identified.
		3.3	Any faults in conflict with roadworthiness or <i>safe operating procedures</i> of component/ tools, equipment and materials are immediately brought to the attention of the supervisor for action.
4.	Component/	4.1	Work schedule documentation is completed.
	equipment is prepared for customer use	4.2	Final inspection is made to ensure safety features are in place.
		4.3	Final inspection is made to ensure work is to workplace expectations.
		4.4	Job card is completed and delivered to appropriate persons.

Occupational standard: Farm Machinery and Equipment Maintenance Level III		
Unit Title	Overhaul Air Conditioning System Components	
Unit Code	AGR MEM3 03 0714	
Unit Descriptor	This unit covers the competence required to overhaul air conditioning system components. The unit includes identification and confirmation of the work requirement, preparation for work, testing and analysis of systems, dismantling, reassembling and retesting of air conditioning system components and completion of work finalisation processes, including clean-up and documentation.	

Elements	Performance Criteria
<ol> <li>Prepare to overhaul air conditioning components</li> </ol>	1.1 Nature and scope of the work <i>specific requirements</i> identified and confirmed are accessed.
	1.2 <b>OHS requirements</b> including regulatory/licensing requirements and <b>Personal Protective Equipment</b> needs are observed throughout the work.
	<ol> <li>Procedures and information are sourced, identified and prepared such as workshop manuals, specifications and tooling, equipment and materials.</li> </ol>
	1.4 Method options are analysed and those most appropriate to the circumstances are selected and prepared.
	1.5 Workplace <i>information sources</i> and technical and/or calibration requirements are accessed for overhauling air conditioning components and procedures strictly adhered.
	1.6 Hazards are observed in relation to working with refrigerants.
	1.7 Awareness of proper decanting and disposal of ozone depleting substances is recognized.
2. Test air conditioning systems and analyse results	2.1 Methods for the conduct of the system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications
	2.2 <b>Safe operating procedures</b> are observed and noted during the use of tools/ equipment in accordance with workplace guidelines
	2.3 <i>Emergency procedures</i> are identified and followed as per organization's guideline.
	2.4 Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance.
	2.5 Results are documented with evidence and supporting information and recommendation(s) made.
	2.6 Report is processed in accordance with workplace procedures.

3. Over conc	Overhaul air conditioning	3.1	Information is accessed and interpreted from manufacturer/component supplier specifications.
	system components	3.2	Air conditioning system components are dismantled, reassembled and tested to manufacturer/component supplier specifications.
		3.3	Worn, damaged, deteriorated or faulty components are identified and replaced/repaired.
		3.4	Air conditioning system overhaul is completed without causing damage to any component or system.
		3.5	System components are tested prior to placing into service and results are documented in accordance with enterprise policies and procedures.
		3.6	Air conditioning system components are overhauled according to industry regulations/guidelines, OHS legislation, legislation and enterprise procedures/policies.
4.	Prepare air	4.1	Work schedule documentation is completed.
	conditioning components and/or system for	4.2	Final inspection is made to ensure protective guards, safety features and cowlings are in place.
	service or storage	4.3	Final inspection is made to ensure work is to workplace expectations.
		4.4	Air conditioning systems/components are cleaned and/or stored to workplace expectations.
		4.5	Job card is processed in accordance with workplace procedures.

Variable	Range	
Specific requirements	May include:	
	compressors	
	Air dryer	
	evaporators	
	condensers	
OHS requirements	are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures and may include:	
	<ul> <li>protective clothing and equipment,</li> </ul>	
	<ul> <li>use of tooling and equipment,</li> </ul>	
	<ul> <li>workplace environment and safety,</li> </ul>	
	handling of material,	
	use of firefighting equipment,	
	enterprise first aid,	
	hazard control and hazardous materials and substances	
Personal Protective Equipment	Is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices	
Tooling and	May include but not limited to:	
equipment	hand tooling	
	cleaning equipment	
	pressure testing equipment

	evacuation equipment
	<ul> <li>heating/soldering equipment</li> </ul>
	<ul> <li>refrigerant recovery and/or recycling equipment</li> </ul>
	refrigerant recharging equipment
Materials	May include but not limited to:
	refrigeration oils
	refrigerants
	<ul> <li>spare parts and cleaning materials</li> </ul>
Information sources	may include:
	• verbal or written and graphical instructions, signage, work
	schedules/plans/specifications, work bulletins, memos,
	material safety data sheets, diagrams or sketches
	safe work procedures related to overhauling air conditioning
	system components
	<ul> <li>regulatory/legislative requirements pertaining to the</li> </ul>
	automotive industry, including International design Rules
	<ul> <li>engineer's design specifications and instructions</li> </ul>
	<ul> <li>organization work specifications and requirements</li> </ul>
	<ul> <li>instructions issued by authorized enterprise or external</li> </ul>
	persons
	International standards
Safe operating	May include but are not limited to:
procedures	<ul> <li>the conduct of operational risk assessment and treatments</li> </ul>
	associated with:
	<ul> <li>vehicular movement,</li> </ul>
	toxic substances,
	<ul> <li>electrical safety,</li> </ul>
	equipment movement and operation,
	manual and mechanical lifting and shifting,
<b>-</b>	working in proximity to others and site visitors
Emergency	May include but are not limited to:
procedures	<ul> <li>emergency shutdown and stopping of equipment</li> </ul>
	extinguisning fires
Overhaul methode	enterprise first aid requirements and site evacuation
and sequences	are to include the:
and sequences	complete dismantling of component parts,
	• measuring and evaluation of wear
	<ul> <li>Inereplacement, repair</li> <li>rebuilding or reconditioning of parts comparable to original</li> </ul>
	<ul> <li>rebuilding or reconditioning or parts comparable to original porto.</li> </ul>
	pails the eccomply of parts
	<ul> <li>Incluster assertion of functional testing and the completion of</li> </ul>
	records
Fault finding	May includes:
	<ul> <li>fault finding with aural visual and functional assessments</li> </ul>
	(including damage corrosion wear refrigeration leakage)
	<ul> <li>reading and interpreting manufacturer/component supplier</li> </ul>
	information

Environmental	May include but are not limited to:	
requirements	• waste management, noise, dust and clean-up management	
Quality requirements	May include but are not limited to:	
	<ul> <li>regulations, including International standards, internal</li> </ul>	
	company quality policy and standards and enterprise	
	operations and procedures	
Statutory/regulatory	May include but are not limited to:	
authorities	Federal and State authorities administering acts	
	<ul> <li>regulations and codes of practice</li> </ul>	
Communications	May include but are not limited to:	
	<ul> <li>verbal and visual instructions and fault reporting and may</li> </ul>	
	include:	
	<ul> <li>site specific instructions,</li> </ul>	
	<ul> <li>written instructions,</li> </ul>	
	plans or instructions related to job/task,	
	telephones and pagers	

Evidence Guide	
Critical Aspects of	Must demonstrate skills and knowledge in:
Competence	<ul> <li>observing safety procedures and requirements</li> </ul>
	· communicating effectively with others involved in or affected
	by the work
	• selecting methods and techniques appropriate to the
	circumstances
	completing preparatory activity in a systematic manner
	identification of the application, purpose and operation
	interpreting the test results
	completing overhaul of the system and associated
Underpinning	Demonstrate knowledge of:
Knowledge and	OHS and environmental regulations/requirements,
Attitudes	equipment, material and personal safety requirements
	identification of the application, purpose and operation
	• identification of component parts to include physical, fluid,
	gases and heat generation
	identification of wear evaluation methods
	types and layout of service/repair manuals
	damage that may occur to electronic control units by the use
	of poor work practices
	measuring and testing procedures
	nature and characteristics of refrigerant
	component repair/overnauling procedures
	enterprise quality procedures
Lindorninning Chillo	Work organization and planning procedures
Underpinning Skills	Demonstrate skills to:
	• apply research and interpretive skills sufficient to locate,
	procedures, workplace policies and procedures
	<ul> <li>apply analytical skills required for identification and analysis</li> </ul>
	of technical information
	<ul> <li>apply questioning and active listening skills for example when</li> </ul>
	obtaining information from customers
	<ul> <li>apply oral communication skills sufficient to convey</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level III		
Unit Title	Farm Implements/Equipment Maintenance	
Unit Code	AGR MEM3 10 0714	
Unit descriptor	This unit covers the competence required to carry out the inspection, service and repair of crop planting, seed drilling spraying and spreading equipment. That equipment refers to specialised equipment involved in crop planting, seeding, spraying and spreading. It does not cover generalised equipment and systems which form the platform or the towing vehicle. The unit includes identification and confirmation of work requirement, preparation for work, inspection and analysis of results, servicing and repair of equipment and completion of work finalisation processes, including clean-up and documentation.

Occupational standard: Farm Machinery and Equipment Maintenance Level III		
Unit Title	Monitor Implementation of Work Plan/Activities	
Unit Code	AGR MEM3 11 0714	
Unit Descriptor	This unit covers competence required to oversee and monitor the quality of work operations within an enterprise. This unit may be carried out by team leaders or supervisors.	

Elements	Performance Criteria
1. Monitor and improve	1.1 Efficiency and service levels are monitored on an ongoing basis.
workplace operations	1.2 Operations in the workplace have been supported overall enterprise goals and quality assurance initiatives.
	1.3 Quality <i>problems</i> and issues are promptly identified and adjustments made accordingly.
	1.4 Procedures and systems are changed in consultation with colleagues to improve efficiency and effectiveness.
	1.5 Colleagues are consulted about ways to improve efficiency and service levels.
2. Plan and	2.1 Current workload of colleagues is accurately assessed.
organise workflow	2.2 Work is scheduled in a manner which enhances efficiency and customer service quality.
	2.3 Work is delegated to appropriate people in accordance with principles of delegation.
	2.4 Workflow is assessed against agreed objectives and timelines and colleagues are assisted in prioritisation of workload.
	2.5 Input regarding staffing needs is provided to appropriate management.
3. Maintain workplace	3.1 <i>Workplace records</i> are accurately completed and submitted within required timeframes.
records	3.2 Where appropriate, completion of records is delegated and monitored prior to submission.
4. Solve problems and make	4.1 Workplace problems are promptly identified and considered from an operational and customer service perspective.
decisions	4.2 Short term action is initiated to resolve the immediate problem where appropriate.
	4.3 Problems are analysed for any long term impact and potential solutions assessed and actioned in consultation with relevant colleagues.
	4.4 Where problem is raised by a team member, they are encouraged to participate in solving the problem.
	4.5 Follow up action is taken to monitor the effectiveness of solutions in the workplace.

Page 196 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1

Critical Aspects of	Demonstrates skills and knowledge in:
Competence	<ul> <li>Check completed work continuously against organization standard</li> </ul>
	<ul> <li>Identify and isolate faulty or poor service</li> </ul>
	Check service delivered against organization standards
	<ul> <li>Identify and apply corrective actions on the causes of identified faults or error</li> </ul>
	Record basic information regarding quality performance
	Investigate causes of deviations of services against standard
	<ul> <li>Recommend suitable preventive actions</li> </ul>
Underpinning	Demonstrates knowledge of:
Knowledge	<ul> <li>Relevant quality standards, policies and procedures</li> </ul>
	Characteristics of services
	<ul> <li>Safety environment aspects of service processes</li> </ul>
	<ul> <li>Evaluation techniques and quality checking procedures</li> </ul>
	<ul> <li>Workplace procedures and reporting procedures</li> </ul>
Underpinning Skills	Demonstrates skills to:
	<ul> <li>interpret work instructions, specifications and standards</li> </ul>
	appropriate to the required work or service
	<ul> <li>carry out relevant performance evaluation</li> </ul>
	<ul> <li>maintain accurate work records</li> </ul>
	<ul> <li>meet work specifications and requirements</li> </ul>
	communicate effectively within defined workplace procedures
Resource	Access is required to real or appropriately simulated situations,
Implications	including work areas, materials and equipment, and to
	information on workplace practices and OHS practices.
Methods of	Competence may be assessed through:
Assessment	Interview / Written Test
	Observation / Demonstration with Oral Questioning
Context of	Competence may be assessed in the work place or in a
Assessment	simulated work place setting.

Unit Title	Lead Workplace Communication
Unit Code	AGR MEM3 13 0714
Unit Descriptor	This unit covers the knowledge, attitudes and skills needed to lead in the dissemination and discussion of information and issues in the workplace.

Elements	Perf	ormance Criteria
1. Communicate information about workplace	1.1	Appropriate <i>communication method</i> is selected
	1.2	Multiple operations involving several topics areas are communicated accordingly
	1.3	Questions are used to gain extra information
	1.4	Correct sources of information are identified
	1.5	Information is selected and organized correctly
	1.6	Verbal and written reporting is undertaken when required
	1.7	Communication skills are maintained in all situations
2. Lead workplace	2.1	Response to workplace issues are sought
discussion	2.2	Response to workplace issues are provided immediately
	2.3	Constructive contributions are made to workplace discussions on such issues as production, quality and safety
	2.4	Goals/objectives and action plan undertaken in the workplace are communicated.
3. Identify and	3.1	Issues and problems are identified as they arise
communicate issues arising in the workplace	3.2	Information regarding problems and issues are organized coherently to ensure clear and effective communication
	3.3	Dialogue is initiated with appropriate staff/personnel
	3.4	Communication problems and issues are raised as they arise

Variable	Range
Methods of	May include but not limited to:
communication	Non-verbal gestures
	Verbal
	Face to face
	Two-way radio
	Speaking to groups
	Using telephone
	Written
	Using Internet
	Cell phone

Unit Title	Improve Business Practice
Unit Code	AGR MEM3 15 0714
Unit Descriptor	This unit covers the skills, knowledge and attitudes required in promoting, improving and growing business operations.

Elements	Performance Criteria	
1. Diagnose the	1.1	Data required for diagnosis is determined and acquired.
business	1.2	<i>Competitive advantage</i> of the business is determined from the data.
	1.3	SWOT analysis of the data is undertaken.
2. Benchmark the	2.1	Sources of relevant benchmarking data are identified.
business	2.2	<i>Key indicators</i> are selected for benchmarking in consultation with key stakeholders.
	2.3	Like indicators of own practice are compared with benchmark indicators.
	2.4	Areas are identified for improvement.
3. Develop plans	3.1	A consolidated list of required improvements is developed.
to improve business	3.2	Cost-benefit ratios are determined for required improvements.
performance	3.3	Work flow changes resulting from proposed improvements are determined.
	3.4	Proposed improvements are ranked according to agreed criteria.
	3.5	An action plan is developed and agreed to implement the top ranked improvements.
	3.6	<i>Organizational structures</i> are checked to ensure they are suitable.
4. Develop marketing and promotional plans	4.1	The practice vision statement is reviewed.
	4.2	Practice <i>objectives</i> are developed/ reviewed.
	4.3	Target markets are identified/ refined.
	4.4	Market research data is obtained.
	4.5	Competitor analysis is obtained.
	4.6	Market position is developed/ reviewed.
	4.7	Practice brand is developed.
	4.8	<i>Benefits</i> of practice/practice products/services are identified.
	4.9	Promotion tools are selected/ developed.
5. Develop	5.1	Plans are developed to increase yield per existing client.
business growth plans	5.2	Plans are developed to add new clients.
growin plans	5.3	Proposed plans are ranked according to agreed criteria.

Page 205 of 336 Copyright Ethiopian Occupational Standard July 2014
---

	5.4	An action plan is developed and agreed to implement the top ranked plans.
	5.5	Practice work practices are reviewed to ensure they support growth plans.
6. Implement and monitor plans	6.1	Implementation plan is developed in consultation with all relevant stakeholders.
	6.2	Indicators of success of the plan are agreed.
	6.3	Implementation is monitored against agreed indicators.
	6.4	Implementation is adjusted as required.

Variable	Range

Occupational standard: Farm Machinery and Equipment Maintenance Level III		
Unit Title	Prevent and Eliminate MUDA	
Unit Code	AGR MEM3 16 0714	
Unit Descriptor	This unit of competence covers the knowledge, skills and attit required by a worker to prevent and eliminate MUDA/waster his/her their workplace. It covers responsibility for the day-to- operation of the work and ensures Kaizen elements continuously improved and institutionalized.	

Elements	Performance Criteria	
1. Prepare for work.	1.1 Work instructions are used to determine job requirements, including method, material and equipment.	
	1.2 Job specifications are read and interpreted following working manual.	
	1.3 <b>OHS requirements</b> , including dust and fume collection, breathing apparatus and eye and ear personal protection needs are observed throughout the work.	
	1.4 Appropriate material is selected for work.	
	1.5 <i>Safety equipment and tools</i> are identified and checked for safe and effective operation.	
2. Identify MUDA.	2.1 Plan of MUDA identification is prepared and implemented.	
	2.2 Causes and effects of MUDA are discussed.	
	2.3 <b>Tools and techniques</b> are used to draw and analyze current situation of the work place.	
	2.4 Wastes/MUDA are identified and measured based on <i>relevant procedures</i> .	
	2.5 Identified and measured wastes are reported to relevant personnel.	
3. Eliminate	3. 1. Plan of MUDA elimination is prepared and implemented.	
wastes/MUDA.	3. 2. Necessary attitude and <i>the ten basic principles for improvement</i> are adopted to eliminate waste/MUDA.	
	3. 3. Tools and techniques are used to eliminate wastes/MUDA based on the procedures and OHS.	
	3. 4. Wastes/MUDA are reduced and eliminated in accordance with OHS and organizational requirements.	
	3. 5. Improvements gained by elimination of waste/MUDA are reported to relevant bodies.	
4. Prevent occurrence of	4.1 Plan of MUDA prevention is prepared and implemented.	
wastes/MUDA.	4.2 Standards required for machines, operations, defining normal and abnormal conditions, clerical procedures and procurement are discussed and prepared.	
	4.3 Occurrences of wastes/MUDA are prevented by using visual	

Page 210 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright		July 2014

and auditory control methods.
4.4 Waste-free workplace is created using <b>5W and 1H</b> sheet.
4.5 The completion of required operation is done in accordance with standard procedures and practices.
4.6 The updating of standard procedures and practices is facilitated.
4.7 The capability of the work team that aligns with the requirements of the procedure is ensured.

Occupational Standard: Farm Machinery and Equipment Maintenance Level IV				
--	---	--	--	--
Unit Title	Carryout Diagnosis of Complex System Faults			
Unit Code	AGR MEM4 01 0714			
Unit Descriptor	This unit covers the competence required to diagnose faults in systems integrating two or more automotive systems or incorporating three or more of mechanical, hydraulic, pneumatic, electrical or electronic media. The unit includes identification and confirmation of the work requirement, preparation for work, diagnosis and identification of the causes of faults, establishment of the repair requirements and completion of work finalisation processes, including clean-up and documentation.			

Elements	ormance Criteria			
1. Prepare for diagnostic	1.1 N	Nature and scope of the work requirements are identified and confirmed.		
procedure	1.2 ( 1 t	<b>OHS requirements</b> , including regulatory requirements and <b>Personal Protective Equipment</b> needs are observed throughout the work.		
	1.3 7 c	Technical and/or calibration requirements for testing and diagnosis are sourced and support <b>tools, equipment</b> and <b>materials</b> are identified and prepared.		
2. Analyse reported faults	2.1 <b>I</b>	<b>Information</b> is gathered from all sources to provide a full overview of all faults and conditions under which they occur.		
	2.2 F	Function and operation of the system are identified when operating correctly.		
	2.3 S	Systematic fault-finding processes are used across relevant systems to determine the extent of the fault.		
	2.4 A	Additional technical sources are consulted to assist with analysis, if necessary.		
	2.5 A	Actual faults are distinguished from perceived faults.		
3. Identify causes of faults	3.1 <i>I</i> f	<i>Diagnostic method</i> , equipment and tests are selected to acilitate precise identification of <i>complex system</i> faults and causes.		
	3.2 T	Tests are applied systematically and efficiently to gather precise data on system operation.		
	3.3 A	Appropriate use is made of technical information to compare gathered data with specifications.		
	3.4 Test results and gathered data are compared to sy specifications and normal functions, and discrepan identified.			
	3.5 S	Source/cause of fault is isolated and confirmed.		
Page 216 of 336 Mi	nistry of Ec Copyric	ducation Farm Machinery and Equipment Maintenance Version 1 aht Ethiopian Occupational Standard July 2014		

4. Establish repair requirements	Establish repair requirements	4.1	Viability of repair or replacement is assessed.
	i oqui onionito	4.2	Appropriate repair procedures are identified and prescribed to meet customer service requirements.
	4.3	Repair requirements are clearly and legibly documented and/or communicated to appropriate persons.	
		4.4	Repairs involving equipment/skills not held in the workshop are sourced from specialist workshops.
		4.5	Customer is informed of the diagnosis and repair requirements.

	chemical testing (e.g. testing of cooling systems)
	technical/service manuals
	component/equipment service history
	body measurements
Complex systems	<ul> <li>body measurements</li> <li>Is defined as one which integrates two or more automotive systems, or incorporates three or more of mechanical, hydraulic, pneumatic, electrical or electronic media. Examples include: <ul> <li>hydraulically/ electronically controlled automatic transmissions,</li> <li>anti-lock braking systems,</li> <li>engine management systems integrating ignition,</li> <li>fuel and transmission control systems</li> </ul> </li> <li>Workplace example: <ul> <li>Customer reports intermittent shifting into top gear on an electronically controlled automatic transmission. The customer is asked a number of questions about the conditions in which the problem occurs (e.g. frequency of the problem, speed, road conditions). A road test is conducted, and the technician detects intermittent speedometer operation. After testing of electrical connections, components and sensors, the intermittent speedometer operation is confirmed to be the problem. Repair requirements are determined to be securing the connections on the speedometer wiring.</li> </ul></li></ul>
Safe operating	May include but are not limited to:
procedures	• the conduct of operational risk assessment and treatments
	associated with:
	> vehicular movement,
	toxic substances,
	electrical safety,
	equipment movement and operation, manual and mochanical lifting and shifting
	<ul> <li>Working in proximity to others and site visitors</li> </ul>
Emergency	May include but are not limited to:
procedures	<ul> <li>emergency shutdown and stopping of equipment</li> </ul>

Occupational Stand	Occupational Standard: Farm Machinery and Equipment Maintenance Level IV				
Unit Title	Overhaul Engines and Associated Engine Components				
Unit Code	AGR MEM4 02 0714				
Unit Descriptor	This unit covers the competence required to overhaul engines and associated engine components. This unit covers required competence required to dismantle, inspect, evaluate and determine preferred repair action of engine components block and sub-assemblies as part of an engine reconditioning, testing and analysis of the system and overhauling process. The unit includes identification and confirmation of work requirement, preparation for work, dismantling of engines, repair, assembly and final checking of engines and completion of work finalisation processes, including clean-up, report writing and documentation. Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.				

Elements Performance Criteria					
1.	Prepare to carry	y 1.1	Nature ar confirmed	nd scope of work requirements are identif d.	ied and
	overhaul systems	1.2	Workplac requirem	e instructions are used to determine job ents, including method, process and equi	pment.
		1.3	Informat analysed materials sub-asse	<i>ion</i> is accessed, procedures and method, , and appropriate <i>tooling, equipment</i> an <b>s</b> options are selected for dismantling eng mblies.	s are d jines and

	work organization and planning processes
	manual handling procedures
Underpinning Skills	Demonstrate skills to:
	• apply research and interpretive skills sufficient to locate,
	interpret and apply manufacturer/component supplier
	procedures, workplace policies and procedures
	<ul> <li>apply analytical skills required for identification and analysis of technical information</li> </ul>
	• apply questioning and active listening skills for example when
	obtaining information from customers
	<ul> <li>apply oral communication skills sufficient to convey</li> </ul>
	information and concepts to customers
	• apply planning and organising skills to own work activities,
	including making good use of time and resources, sorting out
	priorities and monitoring own performance
	• interact effectively with other persons both on a one-to-one
	basis and in groups, including understanding and responding
	to the needs of a customer and working effectively as a
	member of a team to achieve a shared goal
	• the capacity to apply problem-solving strategies in purposeful
	ways, both in situations where the problem and desired
	solution are clearly evident and in situations requiring critical
	thinking and a creative approach to achieve an outcome
	• use mathematical ideas and techniques to calculate time,
	assess tolerances, apply accurate measurements, calculate
	material requirements and establish quality check
	• use workplace technology related to the repair of dry and
	wet clutch and final drive assemblies, including the use of
	measuring equipment, computerized technology and
	communication devices and reporting/documenting of results.
Resources	Access is required to real or appropriately simulated situations,
Implication	including work areas, materials and equipment, and to
	Information on workplace practices and OHS practices.
Methods of	Competency may be assessed through:
Assessment	Interview / Written Test
	Observation / Demonstration with Oral Questioning
Context of	Competency may be assessed in the work place or in a
Assessment	simulated work place setting

Occupational Standard: Farm Machinery and Equipment Maintenance Level IV		
Unit Title	Inspect, Service and Repair Harvesting Equipment	
Unit Code	AGR MEM4 04 0714	
Unit descriptor	This unit covers the competence required to carry out the inspection, service and repair of harvesting equipment. The unit includes identification and confirmation of work requirement, preparation for work, inspection and analysis of results, servicing and repair of equipment and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.	

Elements	Per	formance Criteria
1. Prepare to inspect and	1.1	Nature and scope of <i>harvesting equipment</i> repair requirements are identified and confirmed.
service harvesting equipment	1.2	Workplace <i>information sources</i> are accessed and procedures strictly adhered.
equipment	1.3	<b>OHS requirements</b> , including regulatory requirements and <b>Personal Protective Equipment</b> needs are observed throughout work.
	1.4	Procedures and information such as workshop manuals, specifications, and <i>tooling, equipment</i> and <i>materials</i> are sourced.
	1.5	Repair method options are analysed and those most appropriate to the circumstances are selected and prepared.
	1.6	Technical and/or calibration requirements are sourced for inspecting harvesting equipment and support equipment is identified and prepared.
	1.7	Warnings are observed in relation to working with harvesting equipment.
2. Conduct inspection and analyse results	2.1	<i>Methods</i> are implemented for inspection in accordance with workplace procedures and manufacturer/component supplier specifications.
	2.2	Inspection results are compared with manufacturer specifications to indicate compliance or non-compliance.
	2.3	Results are documented with evidence and supporting information and recommendation(s) made.
	2.4	Report is processed in accordance with workplace procedures.
3. Service and repair harvesting equipment	3.1	<i>Safe operating procedures</i> are observed and noted during the use of tools/ equipment in accordance with workplace guidelines.
	3.2	<i>Emergency procedures</i> are identified and followed as per organization's guideline.

Page 232 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

	3.3	Procedures and information are identified and sourced.
	3.4	Technical and tool requirements are identified and prepared for service and repair are identified and support equipment.
	3.5	Methods are implemented for service and repair in accordance with workplace procedures and manufacturer/ component supplier specifications.
	3.6	Adjustments are made during the service and repair in accordance with manufacturer/component supplier specifications.
4. Prepare equipment for operation	4.1	Variable operating parameters are identified from manufacturer/ <b>system component</b> supplier specifications and analysis of proposed working environment and conditions.
	4.2	Equipment variables, including management systems settings, controls and monitoring systems are established and prepared for proposed operations.
	4.3	Equipment and systems are tested and final adjustments are made to achieve and maintain operating parameters.
	4.4	Regulatory requirements including equipment safety and environmental compliance are applied and satisfied.
5. Prepare	5.1	Service/repairs schedule documentation is completed.
equipment for use or storage	5.2	Final inspection is made to ensure protective guards, safety features and cowlings are in place.
	5.3	Final inspection is made to ensure work is to workplace expectations.
	5.4	Equipment is cleaned for use or storage to workplace expectations.
	5.5	<i>Environmental requirements</i> are observed and precautions implemented according to workplace and environmental protection regulation or guidelines.
	5.6	Job card is processed in accordance with workplace procedures.

Variable	Range
Harvesting equipment	<ul> <li>May include but not limited to:</li> <li>specialised equipment involved in harvesting grain, sugar cane, cotton, rice, forage; It does not cover generalised equipment and systems which form the platform or the towing vehicle</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level IV		
Unit Title	Prepare a Vehicle Repair Quotation	
Unit Code	AGR MEM4 05 0714	
Unit Descriptor	This unit of competency describes the skills and knowledge required to prepare a written vehicle repair quotation.	
	This unit applies to individuals who are required to prepare vehicle repair quotations in the vehicle repair and vehicle loss assessing industries.	

Elements Performance Criteria		formance Criteria
1. Gather	1.1	The particular service required is clarified.
information	1.2	Information sources are located.
	1.3	Any job cost estimation and calculation details are gathered.
	1.4	Labour unit cost projections are obtained.
	1.5	Enterprise quotation elements and procedures are identified.
2. Estimate, cost	2.1	Required parts and materials are estimated and costed.
and prepare vehicle repair quotation	2.2	Direct labour and subcontractor services are estimated and costed.
	2.3	Overheads and mark -up percentages are estimated and costed in accordance with enterprise procedures.
	2.4	Potential quotation variations are noted.
	2.5	A legible and accurate quotation is prepared using the enterprise approved format.
	2.6	Final costs, calculations and other details are verified with relevant enterprise person.
3. Present	3.1	Verbal and written report is presented to customer.
quotation to customer	3.2	Approval is gained to complete repairs from customer.
	3.3	Documentation and file quotation are completed as required by enterprise.

Variable	Range
Information	May include but not limited to:
	Motor Vehicle Insurance and Repair Industry Code of
	Conduct
	<ul> <li>verbal, written and graphical instructions</li> </ul>
	<ul> <li>parts listing prices and catalogues</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level IV		
Unit Title	Implement Operational Plan	
Unit Code	AGR MEM4 06 0714	
Unit Descriptor	This unit describes the performance outcomes, skills and knowledge required to implement the operational plan by monitoring and adjusting operational performance, producing short term plans for the department/section, planning and acquiring resources and providing reports on performance as required. Managers at this level are actively engaged in planning activities to achieve the measurable, stated objectives of the team and the organisation. This key role is carried out to provide safe, efficient and effective products and services to customer satisfaction within the organisation's productivity and profitability plans.	

Elements	Performance Cri	teria
1. Implement operational plan	.1 Details of <b>re</b> and organize <b>colleagues</b>	<i>source requirements</i> are collated, analysed ed in consultation with <i>relevant personnel</i> , and specialist resource managers.
	.2 <b>Operational</b> achievement	<b>plans</b> are implemented to contribute to the of organisation's performance/business plan.
	.3 Key Perform used to mon	nance Indicators (KPIS) are identified and itor operational performance.
	.4 <b>Contingenc</b> undertaken.	<b>y planning</b> and <b>consultation processes</b> are
	.5 Assistance in proposals is operational p	n the development and presentation of provided for resource requirements in line with planning processes.
2. Implement resource acquisition	.1 Employees a organisatio	are recruited and inducted within <b>n's policies</b> , <b>practices and procedures</b> .
	.2 Plans are im and services procedures a	plemented for acquisition of physical resources within organisation's policies, practices and and in consultation with relevant personnel.
3. Monitor operational performance	.1 <b>Performanc</b> assess progratargets.	e systems and processes are monitored to ress in achieving profit/productivity plans and
	.2 Budget and a used to mon	actual financial information are analysed and itor profit/productivity performance.
	.3 Unsatisfacto taken to rect policies.	ry performance is identified and prompts action ify the situation according to organizational
	.4 Mentoring, c support indiv economically	oaching and supervision are provided to iduals and teams to use resources effectively, and safely.
	.5 Recommend operational p	ations are presented for variation to plans to the <i>designated persons</i> / <i>groups</i> and

Occupational Standard: Farm Machinery and Equipment Maintenance Level IV		
Unit Title	Plan and Organize Work	
Unit Code	AGR MEM4 07 0714	
Unit Descriptor	This unit covers the knowledge, skills and attitude required in planning and organizing work activities in a production application. It may be applied to a small independent operation or to a section of a large organization.	

Elements		Performance Criteria		
1. Set objectives		1.1	<i>Objectives</i> are planned consistent with and linked to work activities in accordance with organizational aims.	
		1.2	Objectives are stated as measurable targets with clear time frames.	
		1.3	Support and commitment of team members are reflected in the objectives.	
		1.4	Realistic and attainable objectives are identified.	
2.	Plan and schedule work	2.1	Tasks/work activities to be completed are identified and prioritized as directed.	
	activities	2.2	Tasks/work activities are broken down into steps in accordance with set time frames and achievable components.	
		2.3	Task/work activities are assigned to appropriate team or individuals in accordance with agreed functions.	
		2.4	<i>Resources</i> are allocated as per requirements of the activity.	
		2.5	<i>Schedule of work activities</i> is coordinated with personnel concerned.	
3.	Implement work plans	3.1	<i>Work methods and practices</i> are identified in consultation with personnel concerned.	
		3.2	<i>Work plans</i> are implemented in accordance with set time frames, resources and <i>standards.</i>	
4.	Monitor work activities	4.1	Work activities are monitored and compared with set objectives.	
		4.2	Work performance is monitored.	
		4.3	Deviations from work activities are reported and recommendations coordinated with appropriate personnel and in accordance with set standards.	
		4.4	Reporting requirements are complied with in accordance with recommended format.	
		4.5	Timeliness of report is observed.	
		4.6	Files are established and maintained in accordance with standard operating procedures.	

5. Review and evaluate work	5.1	Work plans, strategies and implementation are reviewed based on accurate, relevant and current information.
activities	5.2	Review is done based on comprehensive consultation with appropriate personnel on outcomes of work plans and reliable feedback.
	5.3	Results of review are provided to concerned parties and formed as the basis for adjustments/simplifications to be made to policies, processes and activities.
	5.4	Performance appraisal is conducted in accordance with organization rules and regulations.
	5.5	Performance appraisal report is prepared and documented regularly as per organization requirements.
	5.6	Recommendations are prepared and presented to appropriate personnel/authorities.
	5.7	<i>Feedback mechanisms</i> are implemented in line with organization policies.

Unit Title	Migrate to New Technology	
Unit Code	AGR MEM4 08 0714	
Unit Descriptor	This unit defines the competence required to apply skills and knowledge in using new or upgraded technology. The rationale behind this unit emphasizes the importance of constantly reviewing work processes, skills and techniques in order to ensure that the quality of the entire business process is maintained at the highest level possible through the appropriate application of new technology. To this end, the person is typically engaged in on-going review and research in order to discover and apply new technology or techniques to improve aspects of the organization's activities.	

Elements	Per	formance Criteria
1. Apply existing knowledge and	1.1	Situations are identified where existing knowledge can be used as the basis for developing new skills.
techniques to technology and transfer	1.2	New or upgraded technology skills are acquired and used to enhance learning.
	1.3	New or upgraded equipment are identified, classified and used where appropriate, for the benefit of the organization.
2. Apply functions of technology to	nctions 2.1 ology to	Testing of new or upgraded equipment is conducted according to the specification manual.
assist in solving organizational problems	2.2	Features of new or upgraded equipment are applied within the organization
problems	2.3	Features and functions of new or upgraded equipment are used for solving organizational problems
	2.4	Sources of information relating to new or upgraded equipment are accessed and used
3. Evaluate new or upgraded	3.1	New or upgraded equipment is evaluated for performance, usability and against OHS standards.
technology performance	3.2	<i>Environmental considerations</i> are determined from new or upgraded equipment.
	3.3	<i>Feedback</i> is sought from users where appropriate.

Variables	Range		
Environmental Considerations	<ul> <li>May include but is not limited to:</li> <li>recycling, safe disposal of packaging (e.g. cardboard, polystyrene, paper, plastic) and correct disposal of waste materials by an authorized body</li> </ul>		
Feedback	May include but is not limited to:		
	<ul> <li>surveys,</li> <li>questionnaires,</li> <li>interviews and meetings</li> </ul>		

Page 247 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1

Unit Title	Establish Quality Standards	
Unit Code	AGR MEM4 09 0714	
Unit Descriptor	This unit covers the knowledge, skills and attitudes required restablish quality specifications for work outcomes and work performance. It includes monitoring and participation maintaining and improving quality, identifying critical contributions in the production of quality output and assisting planning and implementing of quality assurance procedures.	

Elements	Per	Performance Criteria		
1. Establish quality specifications	1.1	Market specifications are <i>sourced</i> and <i>legislated requirements</i> identified.		
for product	1.2	Quality specifications are developed and agreed		
	1.3	Quality specifications are documented and introduced to organization staff / personnel in accordance with the organization policy		
	1.4	Quality specifications are updated when necessary		
2. Identify hazards	2.1.	Critical control points impacting on quality are identified.		
and critical	2.2.	Degree of risk for each hazard is determined.		
	2.3.	Necessary documentation is accomplished in accordance with organization quality procedures		
3. Assist in planning of	3.1	Procedures for each identified control point are developed to ensure optimum quality.		
quality assurance procedures	3.2	Hazards and risks are minimized through application of appropriate controls.		
	3.3	Processes are developed to monitor the effectiveness of quality assurance procedures.		
4. Implement quality	4.1	Responsibilities are allocated for carrying out procedures to staff and contractors.		
assurance procedures	4.2	Instructions are prepared in accordance with the enterprise's quality assurance program.		
	4.3	Staff and contractors are given induction training on the quality assurance policy.		
	4.4	Staff and contractors are given in-service training relevant to their allocated <i>safety procedures</i> .		
5. Monitor quality	5.1	Quality requirements are identified		
of work outcome	5.2	Inputs are inspected to confirm capability to meet quality requirements		
	5.3	Work is conducted to produce required outcomes		
	5.4	Work processes are monitored to confirm quality of output and/or service		
	5.5	Processes are adjusted to maintain outputs within

---

			specification.
6.	Participate in maintaining and improving quality at work	6.1	Work area, materials, processes and product are routinely monitored to ensure compliance with quality requirements
		6.2	Non-conformance in inputs, process, product and/or service is identified and reported according to workplace reporting requirements
		6.3	Corrective action is taken within level of responsibility to maintain quality standards
		6.4	Quality issues are raised with designated personnel
7. Report proble that affect quality	Report problems	7.1	Potential or existing quality problems are recognized.
	that affect quality	7.2	Instances of variation in quality are identified from specifications or work instructions.
		7.3	Variation and potential problems are reported to supervisor/manager according to enterprise guidelines.

Variable	Range

Occupational Standard: Farm Machinery and Equipment Maintenance Level IV		
Unit Title	Manage and Maintain Small/Medium Business Operations	
Unit Code	AGR MEM4 12 0714	
Unit Descriptor	This unit covers the operation of day-to-day business activities in a micro or small business. The strategies involve developing, monitoring and managing work activities and financial information, developing effective work habits, and adjusting work schedules as needed.	

Ele	Elements		Performance Criteria		
1.	Identify daily work	1.1	Work requirements are identified for a given time period by taking into consideration <b>resources</b> and constraints.		
	requirements	1.2	Work activities are prioritized based on business needs, requirements and deadlines.		
		1.3	If appropriate, work is allocated to relevant staff or contractors to optimize efficiency.		
2.	Monitor and manage work	2.1	People, resources and/or equipment are coordinated to provide optimum results.		
		2.2	Staff, clients and/or contractors are communicated within a clear and regular manner, to monitor work in relation to <b>business goals</b> or timelines.		
		2.3	<b>Problem solving techniques</b> are applied to work situations to overcome difficulties and achieve positive outcomes.		
3.   	Develop effective work habits	3.1	Work and personal priorities are identified and a balance is achieved between competing priorities using appropriate <i>time management strategies</i> .		
		3.2	Input from <i>internal and external sources</i> is sought and used to develop and refine new ideas and approaches.		
		3.3	Business or inquiries is/are responded to promptly and effectively.		
		3.4	Information is presented in a format appropriate to the industry and audience.		
4.	Interpret	4.1	Relevant documents and reports are identified.		
	information	4.2	Documents and reports are read and understood and any implications discussed with appropriate persons.		
		4.3	Data and numerical calculations are analyzed, checked, evaluated, organized and reconciled.		
		4.4	Daily financial records and cash flow are maintained correctly and in accordance with legal and accounting requirements.		
		4.5	Invoices and payments are prepared and distributed in a timely manner and in accordance with legal requirements.		
		4.6	Outstanding accounts are collected or followed-up on.		

Page 258 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

5.	Evaluate work performance	5.1	Opportunities for improvements are monitored according to business demands.
		5.2	Work schedules are adjusted to incorporate necessary modifications to existing work and routines or changing needs and requirements.
		5.3	Proposed changes are clearly communicated and recorded to aid in future planning and evaluation.
		5.4	Relevant codes of practice are used to guide an ethical approach to workplace practices and decisions.

Evidence Guide	
Critical Aspects of Competence	<ul> <li>A person must be able to demonstrate:</li> <li>ability to identify daily work requirements and allocate work appropriately</li> <li>ability to interpret financial documents in accordance with legal requirements</li> </ul>
Underpinning Knowledge and Attitudes	<ul> <li>Demonstrate knowledge of:</li> <li>Federal and Local Government legislative requirements affecting business operations, especially in regard to Occupational Health and Safety (OHS), equal employment opportunity, industrial relations and anti-discrimination</li> <li>technical or specialist skills relevant to the business operation</li> <li>relevant industry code of practice</li> <li>planning techniques to establish realistic timelines and priorities</li> <li>identification of relevant performance measures</li> <li>quality assurance principles and methods</li> <li>relevant marketing, management, sales and financial concepts</li> <li>methods for monitoring performance and implementing improvements</li> <li>structured approaches to problem solving, idea management and time management</li> </ul>
Underpinning Skills	<ul> <li>Demonstrate skills to:</li> <li>interpret legal requirements, company policies and procedures and immediate, day-to-day demands</li> <li>communicate using questioning, clarifying, reporting, and giving and receiving constructive feedback</li> <li>numeracy skills for performance information, setting targets and interpreting financial documents and reports</li> <li>technical and analytical skills to interpret business document, reports and financial statements and projections</li> <li>relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities</li> <li>solve problem and develop contingency plans</li> <li>using computers and software packages to record and manage data and to produce reports</li> <li>evaluate using assessment work and outcomes</li> <li>observe for identifying appropriate people, resources and to monitor work</li> </ul>
Resource Implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices
Methods of Assessment	<ul> <li>Competence may be assessed through:</li> <li>Interview / Written Test</li> <li>Observation / Demonstration with Oral Questioning</li> </ul>
Context of Assessment	Competence may be assessed in the work place or in a simulated work place setting.

Page 260 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1

Occupational Standar	Occupational Standard: Farm Machinery and Equipment Maintenance Level IV	
Unit Title	Apply Problem Solving Techniques and Tools	
Unit Code	AGR MEM4 13 0714	
Unit Descriptor	This unit of competency covers the knowledge, skills and attitude required to apply scientific problem solving techniques and tools to enhance quality, productivity and other kaizen elements on continual basis.	

El	Elements		Performance criteria		
1.	Identify and select theme/problem.	1.1	<i>Safety requirements</i> are followed in accordance with safety plans and procedures.		
		1.2	All possible problems related to the process /Kaizen elements are listed using <i>statistical tools and techniques</i> .		
		1.3	All possible problems related to kaizen elements are identified and listed on Visual Management Board/Kaizen Board.		
		1.4	Problems are classified based on obviousness of cause and action.		
		1.5	Critical factors like the number of customers affected, Potentials for bottlenecks, and number of complaints etc is selected.		
		1.6	Problems related to priorities of <i>Kaizen Elements</i> are given due emphasis and selected.		
2.	2. Grasp current	2.1	The extent of the problem is defined.		
	goal. 2.		Appropriate and achievable goal is set.		
3.	3. Establish activity plan.	3.1	The problem is confirmed.		
		3.2	High priority problem is selected.		
		3.3	The extent of the problem is defined.		
		3.4	Activity plan is established as per <b>5W1H</b> .		
4.	Analyze causes of a problem	4.1	All possible causes of a problem are listed.		
		4.2	Cause relationships are analyzed using 4M1E.		
		4.3	Causes of the problems are identified.		
		4.4	Root causes are selected.		
		4.5	The root cause which is most directly related to the problem is selected.		
		4.6	All possible ways are listed using <i>creative idea</i> generation to eliminate the most critical root cause.		
		4.7	The suggested solutions are carefully tested and evaluated for potential complications.		
		4.8	Detailed summaries of the action plan are prepared to implement the suggested solution.		

Page 261 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

5.	Examine countermeasure sand their implementation.	5.1 5.2	Action plan is implemented by <i>medium KPT</i> members. Implementation is monitored according to the agreed procedure and activities are checked with preset plan.
6.	Assess effectiveness of the solution.	6.1 6.2	<i>Tangible and intangible results</i> are identified. The results are verified over time.
		6.3	Tangible results are compared with targets using various types of diagram.
7.	Standardize and sustain operation.	7.1	If the goal is achieved, the new procedures are standardized and made part of daily activities.
		7.2	All employees are trained on the new <b>Standard</b> Operating Procedures (SOPs).
		7.3	SOP is verified and followed by all employees.
		7.4	The next problem is selected to be tackled by the team.

Variables	Range
Safety requirements	<ul> <li>may include but not limited to:</li> <li>OHS requirements include legislation, material safety, managements system, hazardous substances and dangerous goods code and local safe operating procedures</li> <li>Work is carried out in accordance with legislative obligations, environmental legislations, relevant health regulation, manual handling procedure and organization insurance requirements</li> </ul>
Statistical tools and techniques	<ul> <li>may include but not limited to:</li> <li>7 QC tools may include: <ul> <li>Stratification</li> <li>Pareto Diagram</li> <li>Cause and Effect Diagram</li> <li>Check Sheet</li> <li>Control Chart/Graph</li> <li>Histogram</li> <li>Scatter Diagram</li> </ul> </li> <li>QC techniques may include: <ul> <li>Brain storming</li> <li>Why analysis</li> <li>What if analysis</li> <li>5W1H</li> </ul> </li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level V		
Unit Title	Develop and Document Specifications and Procedures	
Unit Code	AGR MEM5 01 0714	
Unit Descriptor	This unit covers the competence to analyse requirements and to develop and document technical specifications and procedures providing concise and unambiguous direction and guidance for workplace activities. This unit covers the work involved in the research for and writing of specifications and procedures for the workplace. Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem-solving skills.	

Elements	Performance Criteria		
1. Identify requirements	1.1	<i>Information</i> required is identified and assembled for technical specifications and procedures.	
	1.2	<i>Specifications</i> and <i>procedures</i> requirements and formats are established and confirmed, where necessary.	
	1.3	Requirements for information entry, storage, output and quality of document production are identified in accordance with enterprise procedures.	
	1.4	Specifications and procedures document are designed as appropriate for efficient entry of information and satisfies appearance and presentation requirements for the purpose of the document.	
	1.5	Range of <i>functions</i> are incorporated in the document design reflects the nominated requirements.	
2. Prepare specifications	2.1	Technical information for use in the specification is collected, tested and validated or confirmed before use.	
	2.2	Authoritative sources and references are identified and used in the preparation and presentation of the specification.	
	2.3	Specifications are written in a format to ensure requirements can be met.	
	2.4	Specifications are written in a manner that is clear and understood in the <i>workplace</i> .	
	2.5	Specification documentation satisfies enterprise and industry standards.	
3. Prepare technical	3.1	Activities and tasks are identified, analysed and documented.	
procedures	3.2	Activities and tasks are sequenced and logically grouped.	
	3.3	Procedures are documented to enterprise and industry standards.	

Variable	Range			
Information	May include k • workplace equipmen • workplace	<ul> <li>May include but not limited to:</li> <li>workplace procedures relating to the use of tooling and equipment</li> <li>workplace procedures relating to reporting and</li> </ul>		
Page 266 of 336	Ministry of Education Copyright	Farm Machinery and Equipment Maintenance Ethiopian Occupational Standard	Version 1 July 2014	

	<ul> <li>communication</li> <li>manufacturer/component supplier specifications and application procedures for testing equipment and materials</li> <li>manufacturer/component supplier specifications, schematics and operational procedures related to systems</li> <li>Ethiopian design rules</li> <li>vehicle industry regulations</li> <li>vehicle industry publications related to emerging system technology and technology changes</li> </ul>
Specifications	are technical criteria for an object, item, system or sub-system describing the components, materials, construction, circuitry and associated legal, regulatory or intellectual property issues
Procedures	contain detailed descriptions of the tasks, activities, sequences, materials, tooling, rules and safety requirements leading or guiding an individual through an authorised work practice
Functions	is undertaken in accordance with established enterprise procedures and practices may include requirements recommended by manufacturer
Workplace	and procedures may be used in established workshops or under external site conditions
Personal Protective Equipment	is to include that prescribed under legislation, regulations and enterprise policies and practices

Evidence Guide	
Critical Aspects of	Must demonstrate skills and knowledge competence in:
Competence	<ul> <li>locate, interpret and apply information</li> </ul>
	• apply safety requirements throughout the work sequence,
	including the use of personal protective clothing and equipment
	<ul> <li>identify and itemise steps and stages in procedures</li> </ul>
	<ul> <li>complete a significant operational procedure, incorporating safety obligations, and covering:</li> </ul>
	> a full analysis of the topic area
	a step-by-step operational procedure
	supporting documents to the procedure
	<ul> <li>complete or review and update a specification for a</li> </ul>
	significant system or sub-system covering:
	system/sub-system description
	> components
	> materials
	> construction
	Circuitry
	related information sources
	legal, regulatory or intellectual property law requirements
	<ul> <li>modify products to cater for variations in workplace cultures and environment</li> </ul>
	work effectively with others
Underpinning	Must demonstrate knowledge of:
Knowledge and	<ul> <li>technical writing and presentation techniques</li> </ul>
Attitudes	• enterprise (or equivalent) technical procedure formats,
	content rules, preparation and management techniques

Page 267 of 336Ministry of Education CopyrightFarm Machinery and Equipment Ethiopian Occupational	t Maintenance Version 1 Standard July 2014
---	---

Underpinning Skills	Must demonstrate skills to:
	collect, organise and understand technical information
	related to the specifications and procedures, testing
	processes, diagnostic methods and options and safety
	procedures
	<ul> <li>communicate ideas and information to ensure the</li> </ul>
	completeness, clarity and comprehension of the
	specifications and procedures by the target audience
	<ul> <li>plan and organise to avoid backtracking, workflow interruptions or wastage</li> </ul>
	<ul> <li>work with others and in a team by recognising dependencies</li> </ul>
	and using cooperative approaches to optimise workflow and
	productivity
	<ul> <li>use mathematical ideas and techniques to incorporate</li> </ul>
	measurements, calibration and test requirements into
	specifications and procedures
	• establish processes which anticipate and allow for risks,
	cater for both direct and indirect causes, avoid or minimise
	reworking and avoid wastage in the preparation and content of procedures
	use the workplace technology related to document
	preparation, including calculators and measuring devices,
	computing systems and information management systems
Resources	Access is required to real or appropriately simulated situations,
Implication	including work areas, materials and equipment, and to
	information on workplace practices and OHS practices.
Methods of	Competency may be assessed through:
Assessment	Interview / Written Test
	Observation / Demonstration with Oral Questioning
Context of	Competency may be assessed in the work place or in a
Assessment	simulated work place setting

Occupational Standard: Farm Machinery and Equipment Maintenance Level V		
Unit Title	Analyse and Evaluate Electrical and Electronic Faults in Power Train	
Unit Code	AGR MEM5 02 0714	
Unit Descriptor	This unit covers the competence to analyse and evaluate electrical and electronic faults in power train in order to initiate action to sustain, vary or enhance performance. It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.	

Elements	Per	formance Criteria		
1. Identify and confirm the work	1.1	Work instru nature and <i>process</i> re	actions and reports are used to determine objective of the <i>failure analysis and ev</i> equirements.	e the <i>aluation</i>
requirement	1.2	Workplace <b>procedure</b>	<i>information</i> sources are accessed and strictly adhered to.	
	1.3	Benchmark correctly fu driveline sy	specifications are accessed and interpre- nctioning electrical and electronic transmi stems.	eted for lission/
	1.4	OHS requi equipment and Perso throughout	<i>irements</i> , including regulatory requireme and system <i>isolation procedure</i> require <i>nal Protective Equipment</i> needs are ob the work.	nts, ements served
	1.5	Effects of s identified a	systemic deficiencies/discrepancies or faund failed and for the factor of the system o	ults are evidence.
	1.6	Possible sa responded obligations	afety impacts of the work are considered to in accordance with regulatory and ent- and practices.	and erprise
2. Prepare for analysis and	2.1	<i>Evaluative criteria</i> are developed/ adopted to meet the objective of the work.		
evaluation	2.2	System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.		
	2.3	Analytical a process, se developed available o	and evaluative methodology, including dia equence, and <b>tests</b> and testing equipmer and/or identified and selected from the ra ptions.	agnostic nt are ange of
	2.4	<b>Testing eq</b> in accordat supplier an	<i>uipment</i> is obtained and prepared for ap nce with regulatory, manufacturer/compo d enterprise requirements.	plication nent
	2.5	Tooling and prepared to	d materials required are identified, selected support the diagnostic process for use.	ed and
	2.6	Electrical a prepared for	nd electronic <i>power train</i> components a or the diagnostic process, including park-	re up,
Page 269 of 336	Ministry Co	of Education pyright	Farm Machinery and Equipment Maintenance Ethiopian Occupational Standard	Version 1 July 2014

		isolation and cleaning requirements.
3. Apply the analysis and evaluative	3.1	Selected analytical and diagnostic processes are followed in accordance with specifications and directions and/or the locally authorised method.
methodology	3.2	Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.
	3.3	Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.
	3.4	Analytical findings and results are evaluated against the agreed criteria.
	3.5	Valid conclusions are drawn from the available evidence and documented to enterprise requirements.
	3.6	Information and detail related to the analysis and evaluation are provided to the appropriate parties in accordance with regulatory and commercial obligations.
4. Select response measure	4.1	Options are identified for responding to the objective or need from further research of technical support information and procedures.
	4.2	A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.
	4.3	Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.
5. Restore the	5.1	Materials that can be reused are collected and stored.
workplace	5.2	Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.
	5.3	Waste and scrap are removed following workplace procedures.
	5.4	Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.
	5.5	Unserviceable equipment is tagged and faults are identified in accordance with workplace.

Variable	Range
Failure analysis and evaluation process	The objective of the failure analysis and evaluation process may be:
	<ul> <li>to determine fault rectification measures,</li> <li>to effect variation in system characteristics and parameters</li> <li>to enhance system performance</li> </ul>

Page 270 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

Procedures	May include but not limited to:
	<ul> <li>workplace procedures relating to the use of tooling and</li> </ul>
	equipment
	<ul> <li>workplace procedures relating to reporting and</li> </ul>
	communication
	<ul> <li>manufacturer/component supplier specifications and</li> </ul>
	application procedures for testing equipment and materials
	manufacturer/component supplier specifications, schematics
	and operational procedures related to transmission/driveline
	systems
	Ethiopian Design Rules
	vehicle industry regulations
	• vehicle industry publications related to emerging power train
	technology and technology changes
OHS requirements	are to be in accordance with applicable legislation and
	regulations, and organizational safety policies and procedures,
	and may include:
	<ul> <li>personal protective equipment and clothing</li> </ul>
	<ul> <li>workplace environment and safety, safety equipment</li> </ul>
	<ul> <li>enterprise first aid and first aid equipment</li> </ul>
	<ul> <li>hazard and risk control and hazardous materials and</li> </ul>
	substances electrical safety
	<ul> <li>elimination of hazardous materials and substances</li> </ul>
	<ul> <li>manual handling, including shifting, lifting and carrying</li> </ul>
	emergency procedures
	<ul> <li>use of tooling and equipment,</li> </ul>
	<ul> <li>handling of material,</li> </ul>
	<ul> <li>use of fire fighting equipment,</li> </ul>
	road rules
	safe driving policy
Isolation	are to be in the industry and enterprise standards and are to
procedures	include the disarming of Supplementary Restraint Systems (SRS)
	by manufacturer/ component supplier specifications
Personal	Is to include that prescribed under legislation, regulations and
Protective	enterprise policies and practices.
Equipment	
Evaluative criteria	Sometimes referred to as success factors, detail the criteria
	against which the achievement of the objectives of the analysis
	are to be judged. They are to include statistically
Teste	based criteria and may include other measures
Tests	to be conducted are to include:
	<ul> <li>winng and connector integrity</li> <li>an and connector integrity</li> </ul>
	operation and specification of input and output devices
	controlling electronic components and computers
	<ul> <li>data interpretation and readings related to direct</li> </ul>
	Indirect and intermittent causes
	system performance
	air supply build-up time
	prime mover and trailer application time
	park brake application
	brake fluid boiling point

Page 271 of 336 Ministr	y of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

	rotor and drum wear
	pad and lining thickness
	brake pedal travel
	nandbrake mechanism travel, NVH
	directional control, ABS operation and performance
	sensor/actuator and wiring namess integrity
	<ul> <li>sampling (collection and processing) and monitoring/analysis</li> <li>of computer based diagnostic systems</li> </ul>
	May also includo:
	hay also include:
	<ul> <li>brake roller testing</li> </ul>
	<ul> <li>friction material wear rate</li> </ul>
	<ul> <li>disc drum and rotor temperature</li> </ul>
Testing equipment	is to include:
	<ul> <li>multi meters.</li> </ul>
	<ul> <li>lab oscilloscopes.</li> </ul>
	<ul> <li>data scanners.</li> </ul>
	<ul> <li>test lights.</li> </ul>
	test LEDs
	pulse generators
	• air gauges
	multimeter and Tappley meter
	brake timer and electronic stethoscope and
	manufacturer/component supplier testing equipment
Power Train	May include but not limited to:
	clutches, torque converters,
	mechanical and automatic transmissions,
	drive and power take-off shafts, and differentials; coverage is
	to include mechatronic modules and multi-class bus systems
	Braking systems:
	foundation
	ABS, ABS with traction control
	air brakes (truck and trailer)
	air brakes (multiple trailer)
	<ul> <li>compression braking, vehicle retardants</li> </ul>
	air over hydraulic systems
	<ul> <li>traction, stability</li> </ul>
	• steering and suspension systems across the range of vehicle
	types
	coverage is to include:
	electronic stability systems,
	vehicle dynamic control, closed loop electronic steering and multi-class bus
	systems
Power Train	May include but not limited to:
electrical and	<ul> <li>direct faults in input sensors, output actuators, wiring harpose</li> </ul>
electronic failures	computer systems, calibration/adjustment specifications
	component specifications. component assembly, component
	damage and system modifications.
	• air supply capacity, application and release times, brake

Page 272 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

	<ul> <li>balance, brake drum wear, calibration/adjustment specifications, component damage, conductors - piping specifications, contamination, friction material abnormalities, leaks, pump-up times.</li> <li>caused by the influence of external systems which may or may not be faulty in their primary operations</li> <li>input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.</li> <li>indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations</li> </ul>
Liming and	May include but not limited to:
Dalahony	<ul> <li>Brake timing and balancing are covered</li> </ul>

Evidence Guide	
Critical Aspects of	Must demonstrate skills and knowledge in:
Competence	<ul> <li>interpret work order and locate and apply information</li> </ul>
	<ul> <li>apply safety requirements, including the isolation of</li> </ul>
	equipment and use of personal protective equipment
	• follow work instructions, operating procedures and inspection
	processes to:
	minimise the risk of injury to self and others
	prevent damage and wastage of goods, equipment and products
	maintain required production output and product quality
	• complete failure analyses on a minimum of three different
	power trains with real or simulated multi-system and
	intermittent faults and identify, evaluate, select and document
	the most appropriate rectification measure
	analyse and validate or recommend variations to a minimum
	of two available repair/modification procedures for different
	power trains
	work effectively with others
	modify activities to cater for variations in workplace context
	and environment
	<ul> <li>basic mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems</li> </ul>
Underpinning Skills	Must demonstrate knowledge of:
	general knowledge of:
	<ul> <li>farm machineries and equipments terminology and</li> </ul>
	definitions
	the concepts, principles and processes involved in
	planning and implementing systems analysis and
	evaluation
	the types, functions and operations of power train

Occupational Standard: Farm Machinery and Equipment Maintenance Level V		
Unit Title	Analyse and Evaluate Electrical and Electronic Faults in Electric over Hydraulic Systems	
Unit Code	AGR MEM5 03 0714	
Unit Descriptor	This unit covers the competence to analyse and evaluate electric over hydraulic systems in order to initiate action to sustain, vary or enhance performance. It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the performer to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.	

Elements	Performance Criteria	
1. Identify and confirm the work requirement	1.1	Work instructions and reports are used to determine the nature and objective of the <i>failure analysis and evaluation</i> requirements.
	1.2	Benchmark specifications are accessed and interpreted for correctly functioning <i>electric over hydraulic systems</i> .
	1.3	<b>OHS requirements</b> including regulatory requirements, equipment and system isolation requirements and <b>Personal Protective Equipment</b> needs are observed throughout the work.
	1.4	Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.
	1.5	Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.
2. Prepare for analysis and evaluation	2.1	<i>Evaluative criteria</i> are developed/ adopted to meet the objective of the work.
	2.2	System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.
	2.3	Analytical and evaluative methodology including diagnostic process, sequence and <i>tests</i> and <i>testing equipment</i> are developed and/or identified and selected from the range of available options.
	2.4	Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.
	2.5	Tooling and materials required are identified, selected and prepared for use to support the diagnostic process.
	2.6	Electric over hydraulic system components, including park- up, <i>isolation procedures</i> and cleaning requirements are prepared for the diagnostic process.

Page 276 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

3. Apply the analysis and evaluative	3.1	Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.
methodology	3.2	Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.
	3.3	Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.
	3.4	Analytical findings and results are evaluated against the agreed criteria.
	3.5	Valid conclusions are drawn from the available evidence and documented to enterprise requirements.
	3.6	Information and detail related to the analysis and evaluation are provided to the appropriate parties in accordance with regulatory and commercial obligations.
4. Select response measure	4.1	Options are identified for responding to the objective or need from further research of technical support <i>information and procedures</i> .
	4.2	A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.
	4.3	Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.
5. Restore the	5.1	Materials that can be reused are collected and stored.
workplace	5.2	Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.
	5.3	Waste and scrap are removed following workplace procedures.
	5.4	Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.
	5.5	Unserviceable equipment is tagged and faults are identified in accordance with workplace procedures.

Variable	Range
Failure analysis and evaluation	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.

1.	Identify and confirm the work requirement	1.1	Work instructions and reports are used to determine the nature and objective of the <i>failure analysis and evaluation process</i> requirements.	
		1.2	Benchmark specifications are accessed and interpreted for correctly functioning <i>monitoring/protection systems</i> .	
		1.3	OHS requirements including regulatory requirements, equipment and system isolation requirements and <i>personal</i> <i>protection needs</i> are observed throughout the work.	
		1.4	Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.	
		1.5	Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.	
2.	Prepare for analysis and evaluation	2.1	Evaluative criteria are developed/ adopted to meet the objective of the work.	
		2.2	System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.	
		2.3	Analytical and evaluative methodology including diagnostic process, sequence, and <b>tests</b> and <b>testing equipment</b> are developed and/or identified and selected from the range of available options.	
		2.4	Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.	
		2.5	Tooling and materials required are identified, selected and prepared for use to support the diagnostic process.	
		2.6	<i>Safety system</i> components are prepared for the diagnostic process, including park-up, <i>isolation procedures</i> and cleaning requirements.

3. A a	Apply the analysis and evaluative methodology	3.1	Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.
-----------	--	-----	--
r		3.2	Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.
		3.3	Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.
		3.4	Analytical findings and results are evaluated against the agreed criteria.
		3.5	Valid conclusions are drawn from the available evidence and documented to enterprise requirements.
		3.6	Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.
4. S r	Select response measure	4.1	Options are identified for responding to the objective or need from further research of technical support <i>information and procedures</i> .
		4.2	A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.
		4.3	Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.
5. F	Restore the	5.1	Materials that can be reused is collected and stored.
v	workplace	5.2	Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.
		5.3	Waste and scrap are removed by following workplace procedures.
		5.4	Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.
		5.5	Unserviceable equipment is tagged and faults are identified in accordance with workplace.

Variable		Range			
Failure analysis and evaluation process		The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.			
Monitoring/protection systems		Monitoring/pr cover disp LCD, V reconfi	otection systems are to: play types, including: /FD, CRT, HUD, gurable systems,

Occupational Standard: Farm Machinery and Equipment Maintenance Level V		
I Init Title	Analyse and Evaluate Farm machineries and equipments	
onit ritie	Performance	
Unit Code	AGR MEM5 06 0714	
Unit Descriptor	This unit covers the competence to analyse and evaluate farm machineries and equipment in order to initiate action to sustain, vary or enhance performances.	

Elements		Performance Criteria		
1.	Identify and confirm the work	1.1	Work instructions and reports are used to determine the nature and objective of the <i>failure analysis and evaluation process</i> requirements.	
	requirement	1.2	Benchmark specifications are accessed and interpreted for correctly functioning <i>farm machineries and equipments performance</i> systems.	
		1.3	WHS requirements are observed including regulatory requirements, equipment and system isolation requirements and <i>personal protection</i> needs throughout the work.	
		1.4	Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.	
		1.5	Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.	
2.	Prepare for analysis and evaluation	2.1	<i>Evaluative criteria</i> are developed/ adopted to meet the objective of the work.	
		2.2	System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.	
		2.3	Analytical and evaluative including diagnostic process, sequence and tests and testing equipment methodology are developed and/or identified and are selected from the range of available options.	
		2.4	Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.	
		2.5	Tooling and materials required are identified, selected and prepared for use to support the diagnostic process.	
		2.6	Farm machineries and equipments performance system components are prepared for the diagnostic process, including park-up, <i>isolation procedures</i> and cleaning requirements.	
3.	Apply the analysis and evaluative	3.1	Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.	

Page 292 of 336 Copyright Ethiopian Occupational Standard	July 2014
---	-----------

	methodology	3.2	<b>Tests</b> and <b>testing equipment</b> are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.
		3.3	Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.
		3.4	Analytical findings and results are evaluated against the agreed criteria.
		3.5	Valid conclusions are drawn from the available evidence and documented to enterprise requirements.
		3.6	Information and detail related to the analysis and evaluation are provided to the appropriate parties in accordance with regulatory and commercial obligations.
4.	Select response measure	4.1	Options for responding to the objective or need are identified from further research of technical support <i>information and procedures</i> .
		4.2	A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.
		4.3	Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.
5.	Restore the	5.1	Materials that can be reused are collected and stored.
	workplace	5.2	Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.
		5.3	Waste and scrap are removed following workplace procedures.
		5.4	Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.
		5.5	Unserviceable equipment is tagged and faults are identified in accordance with workplace.

Variable	Range
Failure analysis and evaluation process	<ul> <li>May include:</li> <li>poor selection, incorrect fitting, overloading, overpowering)</li> <li>propeller selection (size, pitch, material and application)</li> <li>farm machineries and equipments faults</li> <li>The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.</li> </ul>

Farm machineries	Performance and control faults covered by this unit are to include
and equipments	indirect faults caused by the influence of external systems which
performance	may or may not be faulty in their primary operation.
Personal protection	is to include that prescribed under legislation, regulations and
	enterprise policies and practices
Evaluative criteria	Sometimes referred to as success factors, detail the criteria
	against which the achievement of the objectives of the analysis
	are to be judged. They are to include statistically based criteria
	and may include other measures.
Isolation	are to be to industry and enterprise standards
procedures	
lests	to be conducted are to include engine performance and
	maximum speed, farm machineries and equipment performance
	and farm machineries and equipment integrity, fuel and oil
<b>-</b>	consumption.
l esting equipment	is to include:
	compression gauges
	<ul> <li>computer-based diagnostic system</li> </ul>
	<ul> <li>straight edges, tape measure, tachometer</li> </ul>
	feeler gauges, analogue
	<ul> <li>digital multimeter, pressure gauges</li> </ul>
	<ul> <li>stethoscope, temperature gauges</li> </ul>
	<ul> <li>timing lights, torque gauges</li> </ul>
	<ul> <li>verniers, hand and power tooling</li> </ul>
Information and	May include but not limited to:
procedures	<ul> <li>workplace procedures relating to the use of tooling and equipment</li> </ul>
	<ul> <li>workplace procedures relating to reporting and</li> </ul>
	communication
	<ul> <li>manufacturer/component supplier specifications and</li> </ul>
	application procedures for testing equipment and materials
	<ul> <li>manufacturer/component supplier specifications, schematics</li> </ul>
	and operational procedures related to farm machineries and
	equipments installation guidelines
	<ul> <li>farm machineries and equipments industry</li> </ul>
	legislation/regulations
	<ul> <li>farm machineries and equipments industry publications</li> </ul>
	related to farm machineries and equipment system
	technology and technology changes
Unit context	May include but not limited to:
	WHS requirements include legislation, vehicle industry
	regulations, safety management systems, hazardous
	materials and safe operating procedures.
	• work is carried out in accordance with legislative obligations,
	Ethiopian Design Rules, environmental legislation, health
	regulations, manual handling procedures and organisation
	insurance requirements
	• work requires individuals to demonstrate research, analytical,
	judgement and problem-solving skills in the diagnosis of

Occupational Standard: Farm Machinery and Equipment Maintenance Level V		
Unit Title	Develop Workplace Policy and Procedures for Environmental Sustainability	
Unit Code	AGR MEM5 07 0714	
Unit Descriptor	This competency covers the outcomes required to develop and implement a workplace sustainability policy, including the modification of the policy to suit changed circumstances. This competency applies to team leaders/supervisors/managers that are required to develop approaches to environmental sustainability within workplaces, including the development and implementation of policy. It includes communicating with relevant stakeholders, developing and monitoring sustainability policies, and reviewing and improving sustainability policies. This competency applies to all sectors of the manufacturing industry. It may also be applied to all sections of an organisation, including office, warehouse etc.	

Elements	Per	formance Criteria
1. Develop	1.1	Scope of sustainability policy is defined.
workplace sustainability policy	1.2	<i>Stakeholders</i> as a key component are identified and consulted of the policy development process.
pondy	1.3	Environmental sustainability <i>strategies</i> relevant to all stages of work covered by the policy are reviewed.
	1.4	Recommendations are made for policy options based on likely effectiveness, timeframes and cost.
	1.5	Policy that reflects the organisation's commitment to sustainability is developed as an integral part of the business planning and as a business opportunity.
	1.6	Appropriate methods of implementation are agreed.
2. Communicate the policy	2.1	The policy, including its expected outcome is promoted to key stakeholders.
	2.2	Those involved are informed in implementing the policy as to outcomes expected, activities to be undertaken and responsibilities assigned.
3. Implement the policy	3.1	<i>Procedures</i> are developed and communicated to help the implementation of policy.
	3.2	Strategies are implemented for continuous improvement in resource efficiency.
	3.3	Record systems are established for tracking continuous improvements in sustainability approaches and assign responsibilities.
4. Review policy implementation	4.1	Outcomes are recorded and feedback is provided to key personnel and stakeholders.

Page 297 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

2	4.2	Success or otherwise of policy is investigated.
	4.3	Records are monitored to identify trends that may require remedial action and use to promote continuous improvement of performance.
2	4.4	Policy and or procedures are modified as required to ensure improvements are made.

Variable	Range
Scope of sustainability policy	<ul> <li>May include:</li> <li>The area/s of environmental sustainability to be targeted and whether social and economic sustainability will be incorporated</li> <li>The parts of the enterprise to which it is to apply, including whether it is for the whole enterprise, one site, one work area or combinations of these</li> <li>An investigation of the particular business and market context of the industry/ enterprise</li> <li>Addressing sustainability initiatives through reference to standards, guidelines and approaches such as:</li> <li>&gt; ISO 14001 Environmental Management Systems</li> <li>&gt; Life Cycle Analyses</li> <li>&gt; Cradle to grave/cradle to cradle</li> <li>&gt; Global Reporting Initiative</li> <li>&gt; Ecological Footprint Assessment</li> <li>&gt; Triple Bottom Line reporting</li> <li>&gt; Product Stewardship.</li> </ul>
Stakeholders	<ul> <li>include individuals and groups both inside and outside the organisation that have some direct interest in the enterprise's conduct, actions, products and services, including:</li> <li>employees at all levels of the organisation</li> <li>customers</li> <li>suppliers</li> <li>regulators</li> <li>other organisations</li> </ul>
Strategies	<ul> <li>include:</li> <li>awareness raising among stakeholders</li> <li>training of staff in principles and techniques of sustainability</li> <li>promotional activities</li> <li>include ongoing measuring, improving and monitoring such as:</li> <li>Plan, do, check, act cycles</li> <li>Kaizen (continuous improvement)</li> <li>Kaizen blitz (breakthrough improvement event)</li> <li>Six sigma approaches</li> <li>Environmental sustainability strategies include:</li> <li>reducing toxic material and hazardous chemical use</li> <li>minimising resource use through changes in processes, facility design and management</li> </ul>

Page 298 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	Julv 2014
	Copyright		

	<ul> <li>supply chain and life cycle management approaches</li> <li>sourcing renewable energy and low carbon footprint materials</li> </ul>
	<ul> <li>reducing, re-using, recycling and waste reduction</li> <li>product and process improvements</li> </ul>
	<ul> <li>carbon offsets</li> <li>reducing greenhouse gas and other emissions</li> </ul>
Procedures	<ul> <li>are performed in accordance with procedures</li> <li>include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards</li> </ul>

Evidence Guide	
Critical Aspects of Competence	<ul> <li>Must demonstrate skills and knowledge to:</li> <li>develop relevant policy and procedures that comply with the regulatory requirements and business plans</li> <li>develop a workable implementation strategy</li> <li>include measurable criteria for reviewing improvement</li> </ul>
Underpinning Knowledge and Attitudes	<ul> <li>Demonstrates knowledge of:</li> <li>understanding of relevant policy development and implementation processes and practices</li> <li>understanding of the principles, practices and available tools and techniques of sustainability management relevant to the particular industry context</li> <li>best practice approaches relevant to own work area</li> <li>equal employment opportunity, equity and diversity principles and occupational health and safety implications of policy/s being developed</li> </ul>
Underpinning Skills	<ul> <li>Demonstrates skills to:</li> <li>developing and implementing systems and procedures to aid in the achievement of sustainability in the workplace</li> <li>applying quality assurance systems relevant to own enterprise</li> <li>accessing and applying other relevant enterprise polices, procedures and protocols</li> <li>relevant industry competency</li> <li>interpreting business/strategic plans</li> <li>This unit requires the ability to:</li> <li>read and evaluate complex and formal documents such as policy and legislation</li> <li>research, analyse and present information</li> <li>prepare written reports requiring precision of expression and language and structures suited to the intended audience</li> <li>adjust communication to suit different audiences</li> <li>deal with different points of view and dissenting stakeholders</li> </ul>

Page 200 of 226	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1

Occupational Standard: Farm Machinery and Equipment Maintenance Level V	
Unit Title	Estimate and Calculate Costs to Repair, Maintain or Modify a Vehicle
Unit Code	AGR MEM5 08 0714
Unit Descriptor	This unit of competency describes the skills and knowledge required to estimate and calculate the costs to repair, maintain or modify a vehicle taking into account materials, labour and overhead costs. It requires the ability to estimate and calculate costs, analyse information, and report and document the costs.

Elements	Performance Criteria
1. Gather	1.1 The particular service is clarified as required.
information	1.2 Details of the proposed <i>service requirements</i> are obtained and analysed.
	1.3 Labour unit cost projections are obtained.
	1.4 Logistic support contracts, supply agreements or equivalent are obtained and analysed.
	1.5 Details of any proposed warehousing and physical distribution systems and related cost factors are obtained.
	1.6 <i>Information/documents</i> ready for retrieval and application are documented and stored.
2. Estimate	2.1 Cost of repair time is estimated.
materials and labour	2.2 Labour requirements is estimated for direct services and related operations.
	2.3 Cost of subcontractor work is estimated.
	2.4 Type and cost of parts and materials are estimated according to industry and enterprise pricing standards.
	2.5 Final estimate is documented.
3. Determine and calculate	<ol> <li>Components contributing to <i>overhead costs</i> are determined.</li> </ol>
overheads	3.2 Overhead costs are calculated to be attributed to the work in accordance with commercial and enterprise procedures.
4. Calculate costs	<ol><li>4.1 Repair time is costed in accordance with enterprise procedures.</li></ol>
	4.2 Direct labour costs and subcontractor work are costed.
	4.3 Parts and materials are costed.
	4.4 Total job cost, including overheads and mark-up percentages are calculated in accordance with enterprise procedures.
	4.5 Total service cost is calculated.

Copyright Ethopian Occupational Standard July 2014	Page 301 of 336	Ministry of Education Copyright	Farm Machinery and Equipment Maintenance Ethiopian Occupational Standard	Version 1 July 2014
--	-----------------	------------------------------------	---	------------------------

	4.6	Potential quotation variations are noted.
	4.7	Cost calculations are recorded.
5. Document and verify details	5.1	Details of costs and charges are documented in accordance with enterprise procedures.
	5.2	Costs, calculations and other details are verified with relevant enterprise person.
	5.3	Details are documented and filed for future reference and in accordance with <i>organizational policies and procedures</i> .

Variable	Range
Service	may include:
requirements	<ul> <li>specialised work</li> </ul>
	subcontracting
	replacement parts
	repair timeframe
	are to be in accordance with applicable legislation, regulations,
	certification requirements and codes of practice, and may include:
	<ul> <li>award and enterprise agreements</li> </ul>
	industrial relations

Occupational Standard: Farm Machinery and Equipment Maintenance Level V		
Unit Title	Prepare and Evaluate Technical Reports	
Unit Code	AGR MEM5 09 0714	
Unit Descriptor	This unit covers the competence to identify and analyse requirements, to plan and conduct research, to evaluate information and findings, and to develop, document and present technical reports. A technical report is one that researches, analyses and reports on the specifications and/or effectiveness of existing or proposed technical systems, component, materials and/or processes.	

Elements		Per	formance Criteria
	1. Prepare for the reporting	1.1	Purpose or objective of the report is identified, clearly defined and confirmed with the customer or sponsor.
	requirement	1.2	Project timeframe and outline plan of the main activities are prepared and confirmed with key parties.
		1.3	Requirements for information entry, storage, output and quality of document production are identified in accordance with enterprise procedures.
	2. Plan the research effort	2.1	Scope and nature of the information requirements are identified.
		2.2	All possible sources of the required information are researched and identified.
		2.3	A systematic research or information collection plan is designed to optimise the process.
		2.4	Resources are obtained and scheduled to service the research requirements.
	3. Conduct research	3.1	Research is undertaken effectively in accordance with the plan.
		3.2	Experiments and tests to support the research effort are conducted in a manner which ensures the demonstrable integrity of the outcomes or findings.
		3.3	Research findings are logged, documented and stored to maintain traceability.
		3.4	Preliminary analysis is conducted to identify requirements for variations or additions to the research plan.
	4. Analyse the information	4.1	Information is sorted, documented and prepared for the analytical process.
		4.2	Information and data are manipulated to enable reasonable comparisons and judgements.
		4.3	Clarification is sought by way of expert advice and opinion.
		4.4	Conclusions and findings reached are made logical based

Page 305 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014
	· · · •		1

		on objective analysis of the available data.
5. Prepare and present the	5.1	The objectives, process, findings and further actions are clearly reported and defined.
report	5.2	Addresses are reported and the stated objective and timeframe are satisfied.
	5.3	Associated presentation materials that of a standard and quality are reported for the intended audience.
	5.4	Reader comprehension of the report is aided by use of executive summaries and attachments.
	5.5	Protocols, conventions and legal requirements are applied related to acknowledgements and intellectual property.
	5.6	Information management requirements, including documenting and repository actions are satisfied in accordance with enterprise <i>information and procedures</i> .

Variable	Range
Information and procedures	<ul> <li>May include but not limited:</li> <li>workplace procedures relating to reporting and communication</li> <li>vehicle industry publications related to emerging system technology and technology changes</li> <li>professional publications</li> <li>automotive research collections and access facilities</li> <li>manufacturer/component supplier specifications and application procedures for testing equipment and materials</li> <li>manufacturer/component supplier specifications, schematics and operational procedures related to systems</li> <li>Ethiopian Standards</li> <li>Ethiopian Design Rules</li> <li>vehicle industry regulations</li> </ul>
Workplace environment	<ul> <li>may involve individual and team related activities</li> <li>Work may be carried out in a commercial, workshop, laboratory or research establishment</li> </ul>
Personal protective equipment	is to include that prescribed under legislation, regulations and enterprise policies and practices

Evidence Guide	
Critical Aspects of Competence	<ul> <li>Must demonstrate skills and knowledge in:</li> <li>locate, interpret and apply information</li> <li>apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment</li> <li>identify and itemise steps and stages covering confirmation of objective, research planning and conduct and report proparation</li> </ul>
	<ul> <li>complete a significant technical report covering:</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level V			
Unit Title	Develop and Apply Modifications		
Unit Code	AGR MEM5 10 0714		
Unit Descriptor	This unit covers the competence to develop, apply and validate significant modifications to existing systems in order to vary or enhance performance. This includes the preparation and application of specifications and processes complying with safety, legal and commercial obligations.		

Elements		Per	formance Criteria
1. Identify and confirm the modification requirement		1.1	OHS requirements, including regulatory requirements, equipment and system <i>isolation procedures</i> requirements and <i>personal protection needs</i> are observed throughout the work.
		1.2	Purpose and objectives of the modification are identified from an analysis of <i>inputs to the modification method and processes</i> and confirmed with the customer.
		1.3	Outline options for achieving the required purpose and objectives are identified, framed and presented to the customer prior to proceeding.
		1.4	Possible legal and safety impacts of the <i>modification</i> are considered and responded to in accordance with regulatory and enterprise obligations and practices.
2. Develop and validate the modification specification	2.1	Benchmark specifications for the existing systems are accessed and interpreted.	
	modification specification	2.2	<i>Evaluation criteria</i> to be used in the selection of the modification method and in the evaluation of the outcomes are identified and documented.
		2.3	Proposed modification method is selected following the identification, consideration and evaluation of the full range of available and options.
		2.4	Selected option, including material choices and processes are developed in detail and progressively validated against the established criteria.
		2.5	Modification specification is documented to industry and enterprise standards.
3.	Apply and test the modification specification	3.1	Selected modification method and process are followed in accordance with the established specifications.
		3.2	Modification is completed using equipment, tooling and materials in accordance with accepted industry standards and practices.
		3.3	<i>Tests and testing equipment</i> are applied in accordance with regulatory requirements, manufacturer/component

Page 308 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

			supplier specifications and modification specification.
		3.4	Test results and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes.
		3.5	Variations necessitated during the modification process or as a result of testing are incorporated into the modification specification.
		3.6	Information and detail related to the modification are documented and provided to the appropriate parties in accordance with regulatory and commercial obligations.
<ol> <li>Clean up work area and maintain equipment</li> </ol>	4.1	Materials that can be reused are collected and stored.	
	4.2	Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.	
		4.3	Waste and scrap are removed following workplace procedures.
		4.4	Unserviceable equipment is tagged and faults are identified in accordance with workplace <i>information and procedures</i> .
		4.5	Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.

Variable	Range		
Isolation procedures	are to be to industry and enterprise standards		
Personal protection needs	is to include that prescribed under legislation, regulations and enterprise policies and practices		
Inputs to the	May be obtained from:		
modification method and processes	<ul> <li>customer requirements, manufacturer/ component supplier specifications, outcomes of diagnostic processes or from regulatory, licensing and intellectual property legislation, safety requirements and Ethiopian Design Rules</li> </ul>		
Modification	Are to cover significant and non-routine modifications which may include:		
	<ul> <li>adapt or modify the system(s) of farm machineries and equipments to a significantly changed capability</li> </ul>		
	<ul> <li>adapt machineries and equipments systems for different working conditions, for example high altitude or underground mine</li> </ul>		
	• modify or install a significant system(s) for a special purpose in machineries and equipments preparation for registration		
Evaluation criteria	sometimes referred to as success factors, are to be established		
	prior to a modification being undertaken and are to cover safety,		
	functionality, survivability, maintainability, life cycle cost and		
	aesthetics.

Occupational Standard: Farm Machinery and Equipment Maintenance Level V		
Unit Title	Manage Operational Plan	
Unit Code	AGR MEM5 11 0714	
Unit Descriptor	This unit describes the performance outcomes, skills and knowledge required to develop and monitor implementation of the operational plan to provide efficient and effective workplace practices within the organisation's productivity and profitability plans. Management at a strategic level requires systems and procedures to be developed and implemented to facilitate the organisation's operational plan. Therefore, people who manage the work of others and operate within the parameters of a broader strategic and/or business plan. The task of the manager at this level is to develop and implement an operational plan to ensure that the objectives and strategies outlined in the strategic and/or business plan are met by work teams. However in some larger organisations operational plans may be developed by a strategic planning unit.	

Elements	Performance Criteria	
1. Develop operational plan	1.1	<b>Resource requirements</b> are researched, analysed and documented and an operational plan is developed in consultation with <i>relevant personnel</i> , <i>colleagues and specialist resource managers.</i>
	1.2	<i>Consultation processes</i> is developed and/or implemented as an integral part of the operational planning process.
	1.3	Details of the <i>operational plan</i> that include the development of <i>key performance indicators</i> are ensured to measure organizational performance.
	1.4	<i>Contingency plans</i> are development and implemented at appropriate stages of operational planning.
	1.5	The development and presentation of proposals for resource requirements are supported by a variety of information sources and specialist advice is sought as required.
	1.6	Approval for plan is obtained from relevant parties and ensures understanding among work teams involved.
2. Plan and manage resource acquisition	2.1	Strategies are developed and implemented to ensure that employees are recruited and/or inducted within the organisation's human resources management policies and practices.
	2.2	Strategies are developed and implemented to ensure that physical resources and services are acquired in accordance with the organisation's policies, practices and procedures.

Dago 212 of 226	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
Fage 312 01 330	Copyright	Ethiopian Occupational Standard	July 2014

3. Monitor and review operational	3.1	Performance systems and processes are developed, monitored and reviewed to assess progress in achieving profit and productivity plans and targets.
performance	3.2	Budget and actual financial information are analysed and interpreted to monitor and review profit and productivity performance.
	3.3	Areas of underperformance, recommend solutions are identified and prompt action is taken to rectify the situation.
	3.4	Systems are planned and implemented to ensure that mentoring and coaching are provided to support individuals and teams to effectively, economically and safely use resources.
	3.5	Recommendations are negotiated for variations to operational plans and approval is gained from <i>designated persons/groups</i> .
	3.6	Systems are developed and implemented to ensure that procedures and records associated with documenting performance are managed in accordance with <i>organisational policies</i> , <i>practices and procedures</i> .

Variable	Range
Resource	May include but not limited to:
requirements	<ul> <li>goods and services to be purchased and ordered</li> </ul>
	<ul> <li>human, physical and financial resources - both current and projected</li> </ul>
	stock requirements and requisitions
Relevant personnel,	May include but not limited to:
colleagues and	employees at the same level or more senior managers
specialist resource	• managers
managers	<ul> <li>occupational health and safety committee/s and other people with specialist responsibilities</li> </ul>
	supervisors
	<ul> <li>union or employee representatives</li> </ul>
Consultation	May include but not limited to:
processes	<ul> <li>email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual operational plans</li> </ul>
	• mechanisms used to provide feedback to the work team in
	relation to outcomes of consultation
	meetings, interviews, brainstorming sessions
Operational plan	May include but not limited to:
	action plans
	annual plans
	management plans

	tactical plans
Key performance indicators	<ul> <li>May include but not limited to:</li> <li>measures for monitoring or evaluating the efficiency or effectiveness of a system which may be used to demonstrate accountability and to identify areas for improvements</li> </ul>
Contingency plans	<ul> <li>May include but not limited to:</li> <li>contracting out or outsourcing human resources and other functions or tasks</li> <li>diversification of outcomes</li> <li>finding cheaper or lower quality raw materials and consumables</li> <li>increasing sales or production</li> <li>recycling and re-using</li> <li>rental, hire purchase or alternative means of procurement of required materials, equipment and stock</li> <li>restructuring of organisation to reduce labour costs</li> <li>risk identification, assessment and management processes</li> <li>seeking further funding</li> <li>strategies for reducing costs, wastage, stock or consumables</li> <li>succession planning</li> </ul>
Designated persons/groups	<ul> <li>May include but not limited to:</li> <li>groups designated in workplace policies and procedures</li> <li>managers or supervisors whose roles and responsibilities include decision making on operations</li> <li>other stakeholders such as Board members</li> <li>other work groups or teams whose work will be affected by recommendations for variations</li> </ul>
Organisation's policies, practices and procedures	<ul> <li>May include but not limited to:</li> <li>organizational culture</li> <li>organizational guidelines which govern and prescribe operational functions, such as the acquisition and management of human and physical resources</li> <li>Standard Operating Procedures</li> <li>undocumented practices in line with organizational operations</li> </ul>

Evidence Guide	
Critical Aspects of	Demonstrates skills and knowledge in:
Competence	<ul> <li>development of an operational plan with details of how it will be implemented and monitored</li> </ul>
	<ul> <li>knowledge of models and methods for operational plans</li> </ul>
Underpinning	Demonstrate knowledge of:
Knowledge and	<ul> <li>models and methods for operational plants</li> </ul>
Attitudes	budgeting processes
	<ul> <li>alternative approaches to improving resource usage and eliminating resource inefficiencies and waste</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level V			
Unit Title	Manage Budgets and Financial Plans		
Unit Code	AGR MEM5 12 0714		
Unit Descriptor	This unit describes the performance outcomes, skills and knowledge required to undertake financial management within a work team in an organisation. This includes planning and implementing financial management approaches, supporting team members whose role involves aspects of financial operations, monitoring and controlling finances, and reviewing and evaluating effectiveness of financial management processes in line with the financial objectives of the work team and the organisation. This unit addresses the requirement for managers to ensure that financial resources are used effectively. This is done by ensuring access to budget/s and ongoing monitoring expenditure against the budget/s. The unit applies to managers working in small and large business environments and not for profit organisations.		

Elements	Per	Performance Criteria		
1. Plan financial	1.1	Budget/financial plans are accessed for the work team.		
management approaches	1.2	Budget/financial plans are clarified with <i>relevant personnel</i> within the organisation to ensure that documented outcomes are achievable, accurate and comprehensible.		
	1.3	Any changes required to be made to budget/ financial plans are negotiated with relevant personnel within the organisation.		
	1.4	<i>Contingency plans</i> are prepared in the event that initial plans need to be varied.		
2. Implement financial management approaches	2.1	Relevant details of the agreed budget/financial plans are disseminated to team members.		
	2.2	<i>Support</i> is provided to ensure that team members can competently perform <i>required roles</i> associated with the management of finances.		
	2.3	<b>Resources and systems</b> are determined and accessed to manage financial management processes within the work team.		
3. Monitor and control finances	3.1	<b>Processes</b> are implemented to monitor actual expenditure and to control costs across the work team.		
	3.2	Expenditure and costs on an agreed cyclical basis are monitored to identify cost variations and expenditure overruns.		
	3.3	Contingency plans are implemented, monitored and modified as required to maintain financial objectives.		
	3.4	Budget and expenditure are <i>reported</i> in accordance with		

Page 316 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
-	Copyright	Ethopian Occupational Stanuaru	July 2014

		organizational protocols.
4. Review and evaluate financial management	4.1	Data and information on the effectiveness of financial management processes are collected and collated for analysis within the work team.
processes	4.2	Data and information on the effectiveness of financial management processes are analysed within the work team and any improvements is identified, documented and recommended to existing processes.
	4.3	Agreed improvements are implemented and monitored in line with financial objectives of the work team and the organisation.

Variable	Range
Budget/financial	May include:
plans	<ul> <li>cash flow projections</li> </ul>
	<ul> <li>long-term budgets/plans</li> </ul>
	operational plans
	<ul> <li>short-term budgets/plans</li> </ul>
	<ul> <li>spreadsheet-based financial projections</li> </ul>
	<ul> <li>targets or key performance indicators for production,</li> </ul>
	productivity, wastage, sales, income and expenditure
Relevant personnel	May include:
	<ul> <li>financial managers, accountants or financial controller</li> </ul>
	supervisors, other frontline managers
Contingency plans	May include:
	<ul> <li>contracting out or outsourcing human resources and other</li> </ul>
	functions or tasks
	diversification of outcomes
	<ul> <li>finding cheaper or lower quality raw materials and consumables</li> </ul>
	<ul> <li>increasing sales or production</li> </ul>
	<ul> <li>recycling and re-using</li> </ul>
	<ul> <li>rental, hire purchase or alternative means of procurement</li> </ul>
	of required materials, equipment and stock
	<ul> <li>restructuring of organisation to reduce labour costs</li> </ul>
	• risk identification, assessment and management processes
	seeking further funding
	<ul> <li>strategies for reducing costs,</li> </ul>
	<ul> <li>wastage, stock or consumables</li> </ul>
	succession planning
Support	May include:
	<ul> <li>access to specialist advice</li> </ul>
	<ul> <li>documentation of procedures</li> </ul>
	<ul> <li>help desk or identified experts within the organisation</li> </ul>
	<ul> <li>information briefings or sessions</li> </ul>
	<ul> <li>intranet-based information</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level V				
Unit Title	Manage Project Quality			
Unit Code	AGR MEM5 13 0714			
Unit Descriptor	This unit specifies the outcomes required to manage quality within projects. It covers determining quality requirements, implementing quality assurance processes, and using review and evaluation to make quality improvements in current and future projects.			

Elements	Performance Criteria	
1. Determine quality requirements	1.1	<i>Quality objectives</i> , standards and levels are determined, with input from stakeholders and guidance of a higher project authority, to establish the basis for quality outcomes and a <i>quality management plan</i> .
	1.2	Established <i>quality management methods, techniques</i> <i>and tools</i> are selected and used to determine preferred mix of quality, capability, cost and time.
	1.3	Quality criteria are identified, agreed with a higher project authority and communicated to stakeholders to ensure clarity of understanding and achievement of quality and overall project objectives.
	1.4	Agreed quality requirements are included in the project plan and implemented as basis for performance measurement.
2. Implement quality assurance	2.1	Results of project activities and product performance are measured and documented throughout the project life cycle to determine compliance with agreed quality standards.
	2.2	Causes of unsatisfactory results are identified, in consultation with the client, and appropriate actions are recommended to a higher project authority to enable continuous improvement in quality outcomes.
	2.3	Inspections of quality processes and <i>quality control</i> results are conducted to determine compliance of quality standards to overall quality objectives.
	2.4	A quality management system is maintained to enable effective recording and communication of quality issues and outcomes to a higher project authority and stakeholders.
3. Implement project quality improvements	3.1	Processes are reviewed and agreed changes implemented continually throughout the project life cycle to ensure continuous improvement to quality.
	3.2	Project outcomes are reviewed against performance criteria to determine the effectiveness of quality.

---	-----------------	------------------------------------	---	------------------------

	management processes and procedures.
3.	3 Lessons learned and recommended <i>improvements</i> are identified, documented and passed to a higher project authority for application in future projects.

Variable	Range
Quality objectives	May include but not limited to:
	<ul> <li>requirements from the client and other stakeholders</li> </ul>
	<ul> <li>requirements from a higher project authority</li> </ul>
	<ul> <li>negotiated trade-offs between cost, schedule and</li> </ul>
	performance
	those quality aspects which may impact on customer
	satisfaction
Quality management	May include but not limited to:
plan	established processes
	<ul> <li>authorizations and responsibilities for quality control</li> </ul>
	quality assurance
	continuous improvement
Quality management	May include but not limited to:
methods, techniques	brainstorming
and	benchmarking
tools	charting processes
	ranking candidates
	defining control
	undertaking benefit/cost analysis
	<ul> <li>processes that limit and/or indicate variation</li> </ul>
	control charts
	flowcharts
	histograms
	pareto charts
	scatter gram
	run charts
Quality control	May include but not limited to:
	monitoring conformance with specifications
	recommending ways to eliminate causes of unsatisfactory
	performance of products or processes
	monitoring of regular inspections by internal or external
	agents
Improvements	May include but not limited to:
	• formal practices, such as total quality management or
	continuous improvement
	• improvement by less formal processes which enhance both
	the product quality and processes of the project, for
	example client surveys to determine client satisfaction with
	project team performance

Unit Title	Facilitate and Capitalize on Change and Innovation		
Unit Code	AGR MEM5 14 0714		
Unit Descriptor	This unit specifies the outcomes required to plan and manage the introduction and facilitation of change; particular emphasis is on the development of creative and flexible approaches, and on managing emerging opportunities and challenges.		

Elements Pe		Per	formance Criteria
1.	<ol> <li>Participate in planning the introduction and</li> </ol>		<i>Manager</i> contribution is made effectively to the organization's planning processes to introduce and facilitate change.
	facilitation of change	1.2	Plans are made to introduce change in consultation with <i>appropriate stakeholders</i> .
		1.3	Organization's objectives and plans are communicated effectively to introduce change to individuals and teams.
2.	Develop creative and flexible	2.1	Variety of approaches are identified and analyzed to manage workplace issues and problems.
	approaches and solutions	2.2	<i>Risks</i> are identified and assessed, and action initiated to manage these to achieve a recognized benefit or advantage to the organization.
		2.3	Workplace is managed in a way which promotes the development of innovative approaches and outcomes.
			Creative and responsive approaches to resource management are used to improve productivity and services, and/or reduce costs.
3.	Manage emerging challenges and opportunities	3.1	Individuals and teams are supported to respond effectively and efficiently to changes in the organization's goals, plans and priorities.
		3.2	Coaching and mentoring are made to assist individuals and teams to develop competencies to handle change efficiently and effectively.
		3.3	Opportunities are identified and taken as appropriate to make adjustments and respond to the changing needs of customers and the organization.
		3.4	<i>Information needs</i> of individuals and teams are anticipated and facilitated as part of change implementation and management.
		3.5	Recommendations are identified, evaluated and negotiated for improving the methods and techniques to manage change with appropriate individuals and groups.

Unit Title Establish and Conduct Business Relationships		
Unit Code	AGR MEM5 15 0714	
Unit Descriptor	This unit covers the skills, attitudes and knowledge required to	
	manage business relationship with customers.	

Elements	Per	formance Criteria
1. Establish	1.1	Welcoming customer environment is maintained.
contact with customer	1.2	Customer is greeted warmly according to enterprise policies and procedures.
	1.3	Effective service environment is created through verbal and non-verbal presentation according to enterprise policies and procedures.
	1.4	Customer data is maintained to ensure database relevance and currency.
	1.5	Information on customers and service history is gathered for analysis.
	1.6	<i>Opportunities</i> are identified and taken up to maintain regular contact with customers.
2. Clarify needs of customer	2.1	Customer needs are determined through questioning and active listening.
	2.2	Customer needs are accurately assessed against the products/services of the enterprise.
	2.3	Customer details are documented clearly and accurately in required format.
	2.4	Negotiations are conducted in a business-like and professional manner.
	2.5	Benefits are maximized for all parties in the negotiation through use of established <i>negotiation techniques</i> and in the context of establishing long term relationships.
	2.6	The results of negotiations are communicated to appropriate colleagues and stakeholders within appropriate timeframes.
3. Provide information and advice	3.1	Features and benefits of products/services provided by the enterprise are described / recommended to meet customer needs.
	3.2	Information is provided to satisfy customer needs.
	3.3	Alternative sources of information/advice are discussed with the customer.
4. Foster and maintain	4.1	Information needed is pro-actively sought, reviewed and acted upon to maintain sound business relationships.

Page 327 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

business relationships	4.2	Agreements are honored within the scope of individual responsibility.
	4.3	Adjustments to agreements are made in consultation with the customer and share information with appropriate colleagues.
	4.4	Relationships are nurtured through regular contact and use of effective interpersonal and communication styles.

Variables	Range
Opportunities to	May include but not limited to:
maintain regular	<ul> <li>informal social occasions</li> </ul>
contact with	industry functions
customers	association membership
	co-operative promotions
	<ul> <li>program of regular telephone contact</li> </ul>
Negotiation	May include but not limited to:
techniques	<ul> <li>identification of goals, limits</li> </ul>
	<ul> <li>clarification of needs of all parties</li> </ul>
	<ul> <li>identifying points of agreement and points of difference</li> </ul>
	<ul> <li>preparatory research of facts</li> </ul>
	<ul> <li>active listening and questioning</li> </ul>
	<ul> <li>non-verbal communication techniques</li> </ul>
	appropriate language
	• bargaining
	developing options
	confirming agreements
	appropriate cultural behaviour

Evidence Guide	
Critical Aspects of Competence	<ul> <li>Demonstrates skills and knowledge in:</li> <li>consistently applying enterprise policies and procedures and industry codes of practice in regard to customer service</li> <li>providing a quality service environment by treating customers in a courteous and professional manner through all stages of the procedure</li> <li>using effective questioning/active listening and observation skills to identify customer needs</li> <li>communicating effectively with others involved in or affected by the work</li> <li>maintaining relevant and current customer databases in accordance with enterprise policies and procedures</li> <li>ability to build and maintain relationships to achieve successful business outcomes</li> </ul>

Occupational Standard: Farm Machinery and Equipment Maintenance Level V			
Unit Title	Manage Continuous Improvement Process (Kaizen)		
Unit Code	AGR MEM5 16 0714		
Unit Descriptor	This unit describes the performance, outcomes, knowledge, attitude and skills required to sustain and develop an environment in which continuous improvement, innovation and learning are promoted, rewarded and managed.		

Elements	Performance Criteria
1. Diagnose the	1.1 <i>Parameters</i> used for study current situation is obtained.
current status.	1.2 Internal and external environment is analyzed.
	1.3 Problems related to targeted environment is recognized and identified.
	1.4 Problems regarding to current situation are analyzed.
	1.5 Alternatives are generated.
	1.6 Best alternatives are selected.
2. Design an effective	2.1 The values, mission and goals of kaizen management system are clarified.
improvement process (kaizen).	2.2 The <i>kaizen management template</i> and a visual management logo full of purpose and meaning are developed.
	2.3 A clear action strategy (master and detailed plans) is defined.
	2.4 The most effective and proven <i>kaizen tools</i> are chosen and applied.
	2.5 A practical way is identified to involve all employees in <i>Gemba activities</i> (top, middle and bottom).
3. Develop change	3. 1. Kaizen Promotion Team Structure is developed.
Capability.	3. 2. The Kaizen Training Plan is defined and started.
	3. 3. Supervisors' kaizen capability and habits are developed.
	3. 4. Key people are developed in terms of <i>Individual leadership capability</i> .
<ol> <li>Implement improved processes.</li> </ol>	4.1 <i>Sustainability/continuous improvement</i> are promoted as an essential part of doing business.
	4.2 Impacts of change and consequences are addressed for people, and transition plans implemented.
	4.3 Objectives, time frames, measures and communication plans are ensured in place to manage implementation.
	4.4 Contingency plans are implemented in the event of non- performance.

Page 330 of 336	Ministry of Education	Farm Machinery and Equipment Maintenance	Version 1
	Copyright	Ethiopian Occupational Standard	July 2014

	4.5 Failure is followed-up by prompt investigation and analysis of causes.
	4.6 Emerging challenges and opportunities are managed effectively.
	<ol> <li>4.7 Continuous improvement systems and processes are evaluated regularly.</li> </ol>
	4.8 Improvements are communicated to all relevant groups and individuals.
	4.9 Opportunities are explored for further development of value stream improvement processes.
5. Establish	5.1 A system audit tool is defined and implemented.
control.	5.2 The kaizen management system is deployed across all company levels and functions.
	5.3 Results are checked and corrections made.
	5.4 <i>Standard operating procedures</i> are developed and maintained.
	5.5 The recruit, training and evaluation systems are improved and <i>HR practices</i> compensated.
